

STD: Building a Next-Gen Digital Integration Platform

STD the same platform is a global digital settlement platform, using blockchain innovation technology, to achieve multi-chain, multi-wallet, fusion cross-chain system, two-way circulation and settlement, to open the global currency settlement platform, to achieve cross-border, cross-industry, cross-chain, cross-currency settlement and payment service platform, so that each user in the independent block to achieve free transaction settlement, with the free exchange of national fiat currency, with global circulation, settlement and other advantages of the same platform System.

Celikhan, Adiyaman Jul 5, 2022 ([Issuewire.com](https://www.issuewire.com)) - STD platform is excited to announce that it will launch on July 8, 2022, at 3:18 PM Turkey time. STD is an integrated platform that includes the Metaverse Ecosystem and the Business System. STD links BTC, ETH, etc. on the same stage to provide a system for the user chain, break the asset island, and digital asset payment, STD on the same stage uses cross-chain as a driving tool to get through different numbers.

The security isolation of assets and assets has the characteristics of cross-currency, specificity, and sexuality between chains. STD is on the same stage to let blockchain technology. Combining with the real world of world to better build a bridge between the metaverse world and the real world.

Next-Gen Metaverse Economies

STD adopts BitShares (BCH) high-performance DID technology, Bitcoin anonymous technology, TRON smart contract, Ethereum smart contract, and the underlying architecture logic of T RON, combined with its own high-performance public chain, to provide powerful technology for the digital asset field. Support and promote the wide-area application and innovative development of digital assets.

The platform issues the STD Token ecological token, which communicates with the NFT s in the Metaverse. It is not only a general equivalent, but also a token that truly activates smart contracts, and

can flexibly settle various tokens of existing blockchain technologies such as BTC, ETH, and TRX. At the same time, on the same stage of ST and D, the exchange, transaction, and settlement between different currencies, legal currencies, and digital currencies can be realized, and the global seamless link service of capital can be realized for investors.

STD Platform Ecosystem

STD Token is the governance token of the entire metaverse STD platform and the core asset used and circulated throughout the decentralized digital identity. Initially, it will be issued based on the TRON CHAIN and developed in parallel with its own public chain. After the development of the public chain is completed, all STD iD will be mapped to the main grid. A total of 600 million STD Token will be issued. 50% to be used for state governance and mining? 5% to be used for Technical Team? 10% to be used for Fundamental Metals Association? 10% to be used for Dynamic partner, and 25% for Global metaverse community nodes.
