

Test Evolve Announces the New Updated Flare Features For Agile Software Testing

A complete test automation solution for your agile team. Agile testing and auditing tools with real-time cloud dashboard reporting. Fast & flexible testing with detailed test results and quality insights.

London, United Kingdom Jul 14, 2022 ([Issuewire.com](https://www.issuewire.com)) - Test Evolve. We are happy to announce the key features of Flare with more customers looking for affordable resources to support their agile teams worldwide. Test Evolve has launched the brand new features of Flare as a part of its latest

version. Flare arrived with many intensified features, promising to deliver a delightful automation experience and address the usual challenges of the testing community. It is an exciting time for the Test Evolve community as they have a lot of new features that make your testing experience even more accessible and more scalable for practical use. Let's see what's new in Flare.

What Is New?

Test Recorder

The Flare's Test Recorder tool allows testers to record the test from beginning to end. Test Evolve Flare will be the only tool to offer BDD(Behavior Driven Development) Test Recording support for a coded framework in 2 languages - Ruby and JavaScript.

Accessibility Testing

One more feature that Test Evolve offers is Accessibility testing. This next-level feature now enables disabled people to use testing software. Just align it with your test cycle and sync your results all in one place with Test Evolve's test reporting.

Test Accelerator

Test Evolve's Test Automation Accelerator is add-on software that improves the performance of your automated testing tools. Accelerator helps to generate the test automation code.

About Test Evolve

Test Evolve is a software company that offers test automation solutions and professional services to help address the strong demand for automated testing. Test Evolve aims to form a test automation community to help Testers and Developers troubleshoot day-to-day difficulties, share best practices and transformations in test automation, and help you with your automation projects. The Agile methodology for software development focuses on releasing high-quality software regularly and plays an essential role in that, as it helps ensure that the product you release is free from bugs and delivers a quality user experience.

What does our client say about us?

"A very collaborative approach to development."

"A Real Partner."

"Reporting a Real Value."

"Simplicity, Clarity and convenience."

Words From CEO

We're incredibly happy about these new releases of Flare's features. It is an exciting time for the Test Evolve community as we have a lot of new features that make your testing experience even more

accessible and more scalable for practical use.

As QA testers, we aren't typically developers, but we aren't screen jockeys, either. We are somewhere in the gray of the geek profession. If we must code, it makes sense that we use tools that are based on simplicity and readability. We are business-oriented, consumer-focused technology warriors. ~ Sherri Sobanski

Test Evolve is excited to adopt various projects and looks forward to helping the client deliver a peerless user experience with trustability and performance.

We hope you like this latest version of Test Evolve.

Happy testing,

Test Evolve Team.
