

ABAIR announces their 1st course Ai for Radiology Administrators and Technologists

ABAIR allows Radiology Administrators and Technologists to obtain additional certification

Eugene, Oregon Aug 15, 2022 ([Issuewire.com](https://www.issuewire.com)) - **ABAIR** has set its first in-person course to be held in Las Vegas on November 15th and 16th. ABAIR will be providing Radiology Administrators and Technologists with an opportunity to become well-versed experts in the world of AI for radiology.

“We are excited to get this first course off the ground. The feedback and interest have been more than

we would have ever expected. We realize that space will be limited, so we encourage everyone to visit the website and sign up,” said Tom McLaughlin, R.T. MBA, founding member of ABAIR. “We strongly feel that additional education and certification provide medical professionals with the tools to help their department analyze all of the AI coming through the door to see how it may benefit and work in their department.

“Our hope for the course is to have attendees leave with the ability to “speak” AI”, said Shon Smith, founding member of ABAIR.

The ***ABAIR-Ai for Radiology Administrators and Technologists*** is a comprehensive two-day course that has been developed by a team of experts within the AI space. The primary focus of this course is to empower and educate Radiology Administrators and Technologists to break down and evaluate the AI entering their radiology department.

At the end of the course and certification, the Radiology Administrator and/or Technologist will be armed with the knowledge and tools to evaluate the impact of any AI tool looking to enter their department.

The future is bright for ABAIR. In addition to the course, the ABAIR plans to also offer certification and “AiR credits”. AiR credits will be a unique way for the attendees to build on and further their knowledge in the AI space. The ABAIR, in partnership with industry colleagues, is eager to educate the next generation of medical professionals by empowering the healthcare community with a greater understanding of AI technology.
