It is an internationally acclaimed method, also known as the Bellesoma Method™.

Sugar Land, Texas Aug 10, 2022 ([Issuewire.com](https://www.issuewire.com)) - Dr. Gary Horndeski, a Board Certified Plastic Surgeon certified in 1994 by the American Board of Plastic Surgery has developed the Horndeski Method to lift breasts. The USP of this method is that it does not leave vertical scars. It is an internationally acclaimed method, also known as the Bellesoma Method™.

The proprietary Bellesoma Method™ uses a woman's own tissue to reshape, reposition, and secure the breast to the chest muscle instead of relying on the skin. It offers "No vertical scar" surgeries, reshaping a woman's breast without the use of implants. This is a revolutionary surgical method of breast lift because scars often lead women to decide against surgical intervention.

[Dr. Gary Horndeski](#) has developed this method over the last 14 years using three decades of experience and knowledge in mathematics, engineering, and plastic surgery.
