

Stellar Launches a Drive Health Monitor Tool

Metuchen, New Jersey Aug 7, 2022 ([IssueWire.com](https://www.issuewire.com)) - *A must-have preventive check tool that can help users avoid data loss.*

Stellar, a global leader in data care technology, announced the launch and immediate availability of **Stellar Drive Monitor v10** — software designed to monitor hard drive's temperature, performance, and health round the clock. If the health parameters indicate a drive nearing failure condition, it forewarns users and suggests disk cloning to protect users from data loss. Additionally, when the disk is overheated, it suggests a computer shutdown to prevent drive failure.

The latest Stellar Drive Monitor has a new, improved user interface and a brand new reports area that presents a comprehensive graphical representation of SMART attribute status, which can also be saved for future hard disk health assessments.

Furthermore, the new release supports Solid State Drives [SSD] and can scan the disk and display any bad sectors.

"With increasing incidents of overheating electronic devices due to overuse and hot summer conditions, Stellar Drive Monitor is a must-have tool to protect drives from complete failure and avert data loss," said Sunil Chandna, CEO of Stellar.

"Whether personal memories or business-critical files, losing valuable data due to disk failure can gravely affect individuals and organizations. Stellar Drive Monitor is your companion that can protect data and save you from catastrophic loss," he added.

The free Stellar Drive Monitor lets users access all features. At the same time, the advanced Clone Disk function is available in the paid version, is priced at \$19.99 annually, and includes round-the-clock technical support. In addition, the software is compatible with Windows 11, 10, 8.1, 8, and 7.
