

# Create Conversational AI Chatbots through Sinch to Boost Your Customer Service Process

**Noida, Uttar Pradesh Sep 27, 2022 ([Issuewire.com](https://www.issuewire.com))** - Chatlayer.ai is a cloud-based software platform that equips businesses with the capability to create multi-lingual chatbots and voice bots using Artificial Intelligence (AI) and Natural Language Understanding (NLU). This platform allows for intelligent two-way conversations between businesses and their customers across several communication channels, including voice, messaging, and web chat. Services of the Chatlayer.ai platform can be availed with ease through Sinch.

Sinch makes it hassle-free for their clients to win customers by using a quick-to-deploy intelligent [Conversational Chatbot](#). These bots help in taking customer experience to the very next level while driving efficiency and improving customer service speed.

Mobile technology and cloud communications are fundamentally transforming the way brands engage with their customers. The new generation of messaging channels is designed to be conversations and is creating new opportunities for brands to enrich their customer experience. With the Chat layer, Sinch aims at enabling its channel partners and enterprise customers to effectively realize such opportunities.

Chat layer basically is an innovative SaaS AI chatbot platform that supports the creation of powerful **AI Chatbot for Business**. With this platform, companies can create multilingual, multichannel bots in just a few simple steps. This chatbot can be quite helpful in enabling companies to delegate time-consuming, effortful repetitive tasks for quick fixes. Regardless of the industry, a business operates in; having such an [AI chatbot](#) would prove to be incredibly helpful. After all, chatbots can communicate with website visitors in real-time. They are available 24x7 and can respond to customers instantly. This means that whenever a customer messages the business for any reason, they shall be able to get a response immediately. As a result, they are likely to be more satisfied with the brand. The staff members of the company, on the other hand, will be able to move the customers along the sales funnel more easily after implementing a chatbot.
