

Dangbei Mars Pro 4K laser projector is reduced by \$200! A superb projector for the price!

California City, California Sep 14, 2022 (Issuewire.com) - Great promotion! [Dangbei Mars Pro 4K laser projector](#) is reduced by \$200! And an extra surprise!

It's been a period since the release of the Dangbei Mars Pro 4K laser projector. It is well-welcomed by projector enthusiasts.

Before everything, let's look back on the impressive points of this Mighty Brightness Monster!

Incredible 3,200 ANSI lumens brightness

Why do I call it a picture monster? It's got an incredible high brightness of 3,200 ANSI lumens, which is pretty rare in the projectors industry. Brightness is a limit factor for many projectors projecting clearly in daylight conditions. For the best experience, of course, you'll have to close the curtains or save your movie plans for the evening, and bright, direct sunlight will banish portions of the image, but the Dangbei Mars Pro still fares better than most.

Also, **the laser light source is another unavoidable point.** Along with the ALPD tech, the brightness and color richness riched to a higher level. ALPD is the most critical core technology for high-brightness image display, using GaN-based blue laser to excite the movement of fluorescent materials to produce one or more primary colors for image display.

In addition, the life of the laser light source can reach more than 25,000 hours. Calculated according to 10 hours a day, its life is at least 8 years, and according to 8 hours a day, its life is at least 10 years. And it can keep the brightness undiminished for a long time.

Stunning picture quality&Impressive 4K resolution

The [Dangbei Mars Pro](#) sports 4K resolution, and is HDR+ and even 3D compatible. With these two features plus, every subtle detail can be precisely fetched up. Many people have no idea what the 4K exactly is. The common and popular resolution of the videos on our cell phone video players is 1080p. while the 4K is the double 1080p. Even though the 4K resolution of Dangbei Mars Pro is reached by pixel-shifting, you can tell the difference. Also, with 3D equipment, the 3D films can be performed perfectly in your private spaces. The immersive film experience will be fulfilled.

It gets strong multi-connectivity.

On the back of the projector, there are various interfaces, including 2 USB 2.0 interfaces, 2 HDMI interfaces, 1 S/PDIF interface, 1 RJ45 LAN, and 1 3.5 mm Earphone port, compatible with various devices, including computers, TV Boxes, game players, etc.

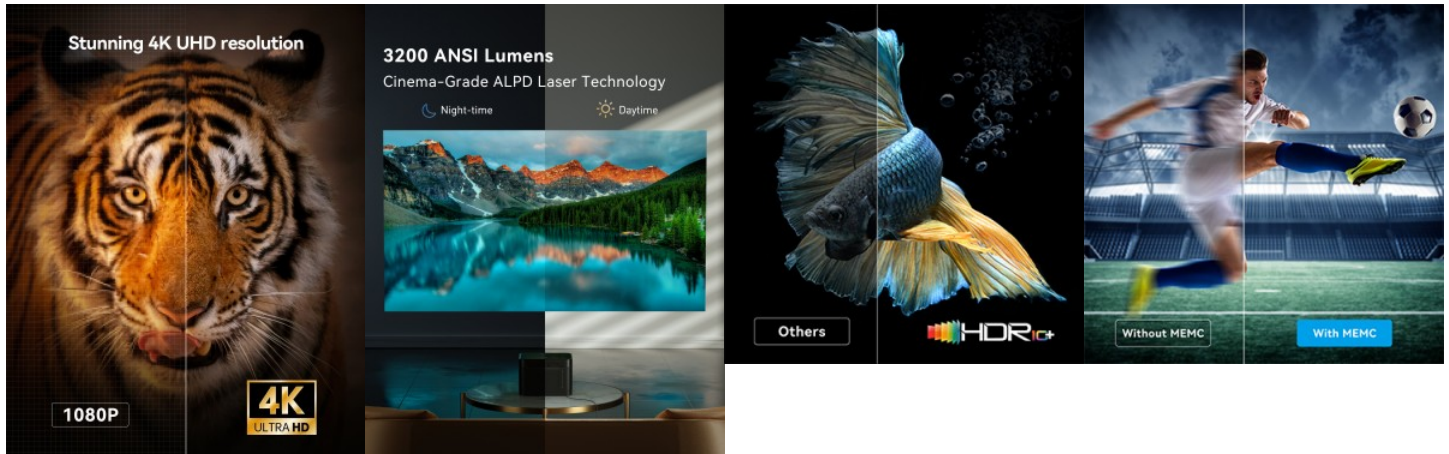

Other pretty features

The new laser projector operates on Android 9.0, enabling users to access plenty of content resources. In addition, its built-in 4G RAM and 128G ROM ensure a smooth operation and large memory. The 128G memory is rarely seen even in some high-end laser projectors.

Dangbei Mars Pro also supports 3D films but with 3D glasses. With movie-situation picture choice and 2 built-in 10W speakers, the 3D performance will work best.

The **Built-in 20W speakers** are perfectly adequate for a film, with Dolby Audio&DTS ensuring the total 20W output (out of two 10W speakers) pulls its weight. Vocals, mids, and rumbling SFX can be performed well, allowing an immersive viewing experience, and making you feel in a real situation.

Go get your 4K projector---[Dangbei Mars Pro](#)!
