

Dangbei Mars Pro: a 4K projector for Ultra-HD home theater

California City, California Sep 5, 2022 ([Issuewire.com](https://www.issuewire.com)) - Have you thought about setting up a home theater with only a projector? When it comes to building a home theater system, the TV or projector comes first, the next thing that should be on your list is to upgrade the sound. Many people are stopped on the first step. It is not easy to choose an appropriate TV or projector, not to mention the sound system. In order to facilitate the customers, the projectors with beautiful image quality and excellent built-in speakers appear. This article will introduce the Ultra-HD home theater: the [Dangbei Mars Pro](#) 4K laser projector.

Let's start with its **picture quality**.

The biggest difference between a TV and a projector is the picture size. It is known to us that the projected picture size can be adjusted while the TV size is fixed. The size of the Dangbei Mars Pro can be adjusted from 60 to 300-inch. Its flexibility suits different space conditions.

Then let's move to the most impressive feature of Dangbei Mars Pro---the stunning picture quality. Powered by the MT9669 high-performance chip and laser light source, Dangbei Mars Pro delivers **4K high-clarity resolution** and **3,200 ANSI lumens hyper brightness**. It is a consensus that brightness is the vital foundation of a projector. The incredible 3,200 ANSI lumens can even project a clear image in the lighting room. On the basis of 4K resolution, Dangbei Mars Pro also supports AI image quality enhancement technology as well as HDR10+, which automatically optimizes picture saturation, brightness, and clarity. Compared to the original image, the [Dangbei Mars Pro](#) projects a 4K picture with high color reproduction, and the details at the edges are not neutered even after zooming in. Also, with 3D equipment, the 3D films can be performed perfectly in your private spaces. The immersive film experience will be fulfilled.

Then the **sound system** also counts.

The Dangbei Mars Pro is self-equipped with 2*10watt built-in speakers. The sound is perfectly adequate for a film, with Dolby Audio&DTS ensuring the total 20W output (out of two 10W speakers) pulls its weight. From the real-world test, the sound performance is loud and delivers good bass.

There are also some other highlights of **intelligent** concepts.

Dangbei Mars Pro adopts plenty of intelligent technologies such as **intelligent obstacle avoidance and intelligent screen alignment**, which makes the use more convenient. Also, it is paired with a **ToF laser sensor**. With a simple setting to auto-live focus/keystone correction, the Dangbei Mars Pro is able to quickly and accurately make the proper adjustments when moving the angle of the projector. It also automatically recognizes and adjusts to the right size when it encounters obstructions such as wall switches so that the picture remains intact at all times.

Final points

With convenient adjustments, stunning picture quality, and great sound performance, the [Dangbei Mars Pro](#) is indeed a practical option for home theater. For a better experience, you can purchase a professional projector screen, which will make great use of the projector.
