DXterity Solutions is awarded a Subcontract Agreement with Precise Systems, a Prime Contractor for the US Navy NAVAIR

The Evolution of Software Development — Artificial Intelligence Code-Writing-Code

Mooresville, North Carolina Sep 2, 2022 (Issuewire.com**)** - 27 Software U.S. Inc. dba DXterity Solutions is pleased to announce the onboarding of our latest client, Precise Systems Inc.

Precise Systems is comprised of highly-skilled experts who provide high-value support and critical service solutions to the U.S. Government and program offices throughout the United States. Precise Systems is utilizing DX8 an Artificial Intelligence Code-Writing-Code set of tools, to automate significant portions of the software code authoring requirements.

The DX8 set of tools works on the principle that if you have a quality data model (software blueprint), then an automated coding engine can author much of the core enterprise code framework.

"The quick integration of the DXterity toolset into the Precise team has been seamless and exceptionally productive. Using the DXterity tool suite is natural to both seasoned and junior developers; there is high value for every user," said Chris Chartrand, CTO of DXterity Solutions.

The patented technology in the DX8 set of tools automates code authoring software faster and significantly reduces the costs and efforts required to write and maintain code. DX8 uses fifty percent fewer resources while also reducing development time by at least fifty percent.

DXterity Solutions:

DXterity launched the DX8 set of tools in May 2020 as a comprehensive SaaS model solution for large enterprise and government accounts dealing with persistent new software demands and burdensome legacy software technical debt. Technical debt is a significant drag on profitability and a technology headache to most organizations exacerbated by slow speeds, poor integration capabilities, and poorly managed code base. According to CodeScene's white paper *Business Costs of Technical Debt*, "Average developers waste 18% of their time due to technical debt." Also, "Developers spend 42% of

their workweek dealing with technical debt." DXterity eliminates this problem.

DXterity Solutions' mission is to continue the evolution of solving software development problems through software development innovation. DXterity Solutions was created to commercialize and scale our unique service and product approach. This approach empowers people and organizations to turn their ideas into business success faster and more reliably than traditional software tools and methods.
