

Opsis debuts world 1st Multi-modality Emotion Recognition Software - SenseCare version 2.0

SenseCare v2.0 will provide users a deep, real-time insights into an almost endless array of a person's emotions with precision thereby generating comprehensive integrated reports based on various various parameters & analysis of data collected.

Singapore, Singapore Sep 9, 2022 (Issuewire.com) - Opsis is releasing [SenseCare version 2.0](#), a new multi-modal Facial, Speech tone, and Body language emotion recognition AI software. The A*STAR spin-off, helmed by industry veterans Dr. Stefan Winkler and Andrew Ow, aims to disrupt the healthcare industry by helping volunteers and counselors to assess and evaluate quickly and accurately in detecting mental health issues and provide early interventions.

[Opsis Emotion AI](#) launches with its flagship product SenseCare 2.0: a multi-modal, emotion recognition AI software that combines Face (Emotion), Voice tone (speech), and Posture (body language) with psychological annotation to identify a person's sentiments, which is a world first to have this capability. A Healthcare grade technology that utilises a highly accurate Psychology Circumplex Model resulting in more precise emotion measurements with multi-dimension data points.

"This will provide users deep, real-time insights into an almost endless array of a person's emotions with precision thereby generating comprehensive integrated reports based on various parameters and analysis of data collected," says Andrew Ow, CEO, and Co-Founder of Opsis Emotion AI.

This tool can assist physicians and caregivers in improving their psychological assessments by identifying signs of non-motor Stage 1 and Stage 2 symptoms for Depression, Anxiety, Cognitive decline, Psychosis, insomnia, and Hallucinations and design more appropriate interventions to prevent behavioural and psychological deterioration, and improve the quality of life for the elderly.

Andrew further adds, "Opsis' proprietary [emotion recognition technology](#) and expertise are core to the company businesses and the company is ready to showcase these to potential partners across the world."

About Opsis

Opsis is a spin-off from the Advanced Digital Sciences Center (ADSC), a joint research institute between the University of Illinois and A*STAR. The company is a leading Emotion AI software solution for multi-modality analysis - powering applications and digital experiences in the new normal.
