

Oukitel's Flagship P2001 Portable Power Station: Safe and Reliable Power Supply for Home and Camping

Jiulong, Xianggang Sep 30, 2022 ([Issuewire.com](https://www.issuewire.com)) - Oukitel's Flagship P2001 Portable Power Station: Safe and Reliable Power Supply for Home and Camping

In many countries and areas, there is a huge rise in the adoption of backup power today for any unpredictable situation, such as home blackouts and natural disasters. The battery, diesel, and gas-powered generators are the most accessible options in the global portable power supply market. The benefits of the portable battery-powered station can be commonly recognized in environment protection and maintenance costs.

OUKITEL introduced the [P2001 portable power station](#) in January 2022, which is designed for home power outages, camping, RV, and disaster prevention. It comes with a 2000Wh massive battery capacity, 2000W huge AC output, 1.5 hours of super-fast charging, etc.

2000Wh Huge Capacity and 2000W AC Output

The P2001 power station is equipped with a capacity of 2000Wh (LiFePO4), the largest battery in the lineup of Oukitel. Moreover, the rated output of 2000W (Surge 4000W) can almost power 99% of your electric devices, such as TV, microwave, rice cooker, fridge, coffee maker, etc. for hours, even including those heavy-duty ones (electric drill, circular saw, bench grinder, etc.)

1.5H Super-fast Recharging

There are 4 main recharging methods (standard wall outlet, solar panel, electric car, or other power

generators) to power P2001. It is well-known as an eco-friendly solar generator. Charging P2001 fully takes less than 4 hours by solar panels (MAX 500W). P2001 features a time saver since this large capacity can be refueled fully in 1.5 hours by dual recharging (1100W AC Input together with 500W solar panels or 500W adapter simultaneously)

Durability and Safety: LiFePO4 Battery and UPS & BMS

The P2001 portable power generator is built with LiFePO4 batteries. It supports 3,500 life cycles, which can still reach up to 70% of the original capacity. P2001 Uninterruptible Power Supply (UPS) can protect your fragile electrical products from any sudden power failure damage, particularly those medical essential equipment. The safety of the P2001 battery is guaranteed by the Battery Management System (BMS). Being monitored by this intelligent system, all errors, such as overheating, overload discharging, over-voltage discharging, etc. can be fixed automatically.

[OUKITEL P2001 portable power generator](#) is built for covering almost all your power needs in the safest, greenest, and most efficient way, which is the best portable power source for camping, RV travel, unexpected power outages, and natural disasters.

About OUKITEL

OUKITEL, founded in 2007, is a well-known international consumer electronics manufacturing company in Hong Kong. With the rich experience from the track record of creating huge capacity and durable batteries. Our vision is to enable everyone to access renewable power for building a green planet. We move to a sustainable and eco-friendly future together. Official website: <https://us.oukitel.com>.

Enjoy the nice summer camping

Drive to a beautiful campsite on a breezy day, then spend some time with friends or families. You can also enjoy the same comfort outdoors as staying at home. Cold beverages from the mini fridge, fresh BBQ meals from the grill, etc.
