

Panhwar Jet, the world's first all-electric long-range aircraft manufacturer, announces equity crowdfunding campaign.

Panhwar Jet has already finalized, tested, and verified their proprietary wind powered energy generation system by independent industry experts.

Park City, Utah Sep 20, 2022 ([Issuewire.com](https://www.issuewire.com)) - Panhwar Jet, the world's first all-electric long-range aircraft manufacturing company, announces an equity crowdfunding campaign via the SEC-regulated platform WeFunder.

Panhwar Jet Inc. is an electric aircraft manufacturing company that is designing and building the world's first all-electric long-range luxury business jet.

Unlike other Electric aircraft manufacturing companies, the Panhwar Jet team decided not to waste millions of dollars on an aircraft prototype that still poses a challenge to fly for another ten years due to heavy batteries.

But instead, the Panhwar Jet team worked hard for almost three years and invented a wind-powered energy generation system. This innovative technology could disrupt the trillion-dollar aviation industry by bringing sustainable green tech and reducing carbon emissions.

The Panhwar's innovative energy systems not only assure that their stylish five-seater planes fly but also fly longer than fossil-fuel counterparts and almost eliminate the dependency on heavy batteries.

Panhwar Jet team expects flight time between 6 to 8 hours while others are waiting for battery density to

increase and yet cruise for only 1 to 2 hours maximum.

With an ambitious growth plan to disrupt the Trillion- Dollar Aviation Industry, Panhwar Jet hopes to attract passionate shareholders to make the environment green and introduce green aircraft to the aviation industry.

Panhwar Jet is raising \$3.5million, and with these funds Panhwar Jet team is expecting to complete the first prototype, launch our first test flight, begin the FAA Certification process, and start taking pre-orders.

Panhwar Jet forecasts almost three times less manufacturing cost and four times faster manufacturing than its fossil fuel counterparts. The US infrastructure bill and government investments also aid in speeding up the market size.
