**Udaipur, Rajasthan Sep 5, 2022 ([Issuewire.com](https://www.issuewire.com))** - There's no need to suffer through metal braces anymore! **Clear Aligners** are the latest innovation in orthodontic treatments, and they offer a much more **comfortable** and **convenient** way to achieve the smile a person always wanted. In **Clear Aligners**, teeth move gradually into the desired position by using clear plastic trays. They are virtually invisible when worn, and help in **straightening teeth** without anyone even knowing. [Clear Aligners](#) are also removable. Users can take them out for eating, drinking, and cleaning.

Best of all, they're more **comfortable** to wear than metal braces ensuring treatment with minimal discomfort. It helps to move teeth very slowly and is custom-made for each individual.

[DentC Clear Aligners](#) are transparent trays made of high-quality material that straighten teeth. A gentle and constant force is applied to move the teeth in the desired position without the hassle of wires and brackets. Digital scans help to customize them for each patient.

Give a call today to learn more about **Clear Aligners** and how they can help to achieve a beautiful, straight smile!
