

The Health Lync Launches 'SuperCAPETM' Indiegogo Campaign, Record Heart and Lung Sounds via Smartphone.

SuperCAPETM is a versatile device that connects to any smartphone and diagnoses heart and lung health. This device allows users to simultaneously record and share their heart and lung sounds with anyone, including their doctor.

Austin, Texas Sep 19, 2022 ([Issuewire.com](https://www.issuewire.com)) - [The Health Lync](#) has introduced a new campaign on Indiegogo to promote their new SuperCAPETM, a cape that allows any smartphone owner to listen to heart, lung, and abdominal sounds with a digital stethoscope. Through this project, the company is looking to raise \$45,000 in the next 50 days and will offer the cape to health professionals and the general public. With this product launch, Health Lync has become one of the first telehealth marketplaces with synchronous diagnostics. This SuperCAPE(TM) is now available for pre-order. This new diagnostic tool will allow clinicians and patients to interact in real-time and provide additional modes like a pulse monitor and otoscope, which are used for the ear, nose, and throat.

The Health Lync founder and CEO, Sachin Junnarkar, Ph.D., said, *"The SuperCAPE(TM) is a stethoscope you can take with you anywhere, neither needing batteries nor charging, it's always ready for use. With the help of a Health Lync app, SuperCAPE(TM) step-by-step instructions, and some simple tools, anyone can learn how to use the SuperCAPE(TM) to perform heart and lung exams on themselves and others. Our goal with this SuperCAPE(TM) project is to give people easy access to health information, real-time and easily."*

Some of the backers have come up with many use cases. Here are a few:

**** Do you ever worry about your parents visiting from abroad and being unable to get care from their primary physician back home?***

**** Have you ever wished telehealth doctors could listen to your lungs during COVID?***

**** Have you done late-night ER visits for your Kids or Parents?***

The answers are certainly yes for me. I am excited to share that I have pledged my support and received my SuperCAPE! You should get it too.

Now using SuperCAPE, you can use your phone to listen, record, and share your heart and lung sound with your Doctor anywhere in the world to get a primary check-up.

The Health Lync team consists of doctors and engineers who saw first-hand how smartphones became increasingly popular among patients and physicians. The team realized how important it was for more people to access primary health care. SuperCAPE(TM) has two parts: A mobile application that works with Android devices(available in the play store) and Apple devices(coming soon) and the CAPE, which attaches to the microphone of any smartphone or tablet. The SuperCAPE(TM) was developed by experts in audio engineering, mechanical engineering, and medical sciences, working together to bring an elegantly engineered device that allows anyone to listen, record, and share their heart and lung sounds using their phone or tablet.

The Health Lyncs' SuperCAPE(TM) is now available for backers for only \$150 and for a limited time via Indiegogo: <https://www.indiegogo.com/projects/SuperCAPE-stethoscope-cape-for-your->

About The Health Lync

The Health Lync is a health IT company that provides mobile and cloud-based solutions to healthcare professionals. Its new product is called SuperCAPETM, a cape that attaches to a smartphone and amplifies its sound. It allows users to listen to heart and lung sounds through their smartphone or tablet and can be a health reference for the doctor. For more information about SuperCAPETM and to participate in the project, please visit the SuperCAPETM Indiegogo project at
