

Dr. Bruno Sharp Announces the New In-House Dental Laboratory

As a prosthodontist and leader in cosmetic dentistry in Miami, Dr. Bruno Sharp and his team are specialists in the restoration and replacement of teeth, today's architects of dental treatment plans, and heralded as "the plastic surgeons of dentistry."

As a prosthodontist and leader in [cosmetic dentistry in Miami](#), Dr. Bruno Sharp and his team at Sharp Dentistry & Associates are specialists in the restoration and replacement of teeth, today's architects of dental treatment plans, and heralded as "the plastic surgeons of dentistry."

With over three decades of experience transforming smiles, Miami cosmetic dentist Dr. Bruno Sharp at Sharp Dentistry & Associates is widely considered a pioneer in cosmetic dentistry.

Dr. Sharp and the office's team of dental professionals have undergone extensive training to be the best in their fields, offering advanced treatments in the areas of cosmetic dentistry, porcelain veneers, oral rehabilitation, dental implants, and more, all conveniently delivered under one roof.

Shorter Treatment Time & Quality Control

In-house dental lab reduces the time required for a dental treatment drastically. Because, when a dentist outsources the lab work, initial work often can be completed in 12 weeks, depending on the case. You must wait for the lab to finish your work and send it back to the dental clinic. Moreover, the dentist has to send it to the lab again for each adjustment.

On the other hand, if the dentist has an in-house lab, even the most difficult cases can be completed in a couple of days. When the patient wants a change in the design, or the restoration doesn't fit well, the required adjustments can be completed much faster right in the office. When there is a case of an emergency, restorations can be achieved even within two days. So, the in-house dental lab saves significant time for patients, which is a big benefit.

Our great technician creates artistic dental work by using state-of-the art technology in our lab. Thanks to the close cooperation of our experienced dentists and skilled technician, you get the smile of your dreams in a short time.

Quality Control:

Having our [laboratory on-site](#) allows us to have much better control of your treatment from start to finish. It also helps to ensure the quality of the work, product, and service that we provide. Our lab technician can provide a customized service as he can assess your needs with our dentists at your initial appointment. Our Dental Lab Technician can make precise molds of your teeth right here and have advanced technology that allows him to see the shape, formation, and exact color of your teeth at the early stages. He can easily locate any problems that will involve expertise and work with our dentist from the start. This minimizes the risks of any errors or mistakes, which can cost you time and money.

Having an On-Site Dental Lab allows a single human to personally hand make your dental product, not an assembly line. As soon as the first version of the product leaves the lab it can be fit and tested immediately by the doctors. Color, Fit, Strength, and Aesthetic values can be quickly assessed and any modifications can be made right away to ensure a perfect result.

Aesthetics:

Your teeth are a vital part of your appearance. Having a beautiful smile is important for your confidence. Our technicians who craft your crowns, veneers, implants, or dentures, have the skills to ensure that you get the best dental restoration as he and the dentist together will evaluate and customize treatment on-site during the consultation. Having an On-Site Dental Lab means your technician can meet you face to face and ensure he makes the right choice of color, shape, direction, and size for your restoration so it

matches your facial features, skin color, and the rest of your teeth.

When Cosmetic Dentistry is performed correctly, no one should ever know it was done.

An in-house dental laboratory and its technicians a vital part of a patient's dental care. The laboratory works directly with dentists by following their detailed instructions. It uses impressions and molds of the patient's teeth or oral soft tissues, to create [dentures](#), [partial dentures](#) and [implants](#), [bridges](#), crowns, veneers, and orthodontic appliances to help straighten and protect teeth and to ensure a beautiful smile.

(99% of Dental Offices DO NOT HAVE A DENTAL LAB).
