Bradenton, Florida Nov 9, 2022 ([Issuewire.com](https://www.issuewire.com)) - Acne affects up to 50 million Americans. AviClear™ is the first FDA-cleared treatment for mild to severe acne. AviClear™ treats current and future acne and provides long-term results with no prescriptions and no harmful side effects. No long-term antibiotics to disrupt the natural immunity or gut biome. A future without worrying about acne could be three 30-minute treatment sessions away.

This laser has a unique mechanism of action and is the only laser in its class directly targeting the oil glands causing what appears to be long-term, if not permanent, shrinkage. Data accumulated for 3 years shows no need for additional treatments after the first three. Works on children, teenagers, young adults, and older adults. Acne sufferers no longer have to be concerned with traditional acne therapies' long-term hassles or harmful side effects.

Bradenton Dermatology & Laser will now offer a drug-free solution for mild to severe acne. A new laser treatment that addresses one of the primary causes of acne — the production of oils on your skin called sebum. AviClear™ treatments consist of three 30-minute sessions spaced 3-4 weeks apart. In clinical trials, 87% of patients were satisfied with their results.

Patients may see improvement in their skin during the treatment series, with notable improvement as early as one month after the third treatment session. There was no prolonged patient downtime in the clinical trials.

AviClear™ is equipped with exclusive AviClear™ sapphire skin cooling and smart sensors to maintain your skin's temperature during treatment for a more comfortable experience.

AviClear™ is a cost-effective solution to treat acne compared to traditional forms of treatment. Now patients suffering from pimples, cystic acne, and hormonal acne can find relief in addition to other related conditions like Rosacea and Hidradenitis Suppurativa (HA) cysts in the axillary, groin, or breasts.

Available at Bradenton Dermatology Center with offices in St. Petersburg and Sun City Center, and Sarasota, Pinellas, Manatee, and Hillsborough County treatment range.
