Working at Height Safely Assessment & Control Measures

South Yorkshire, United Kingdom Nov 28, 2022 ([Issuewire.com](https://www.issuewire.com)) - Office Compliance is one of the most renowned safety compliance service providers in London. They have helped several businesses develop adequate safety skills in their employees. They are known for their versatility and for helping businesses incorporate essential safety measures to ensure a safe work environment for their employees.

For immediate release:-

Safety is among the essentials of a business process. A safe environment is essential for businesses and employees to stay productive and work to the best of their capabilities. Safety measures may vary from business to business depending upon their work nature and complexities.

Working at heights is one of the laborers that must strictly comply with safety regulations. The construction and maintenance industry is the mainstream industry requiring employees to work at heights. Some examples of construction works that require execution at height are as follows:

- The erection of the steel framework of a building by steelworkers.
- Cladding the roof of a steel framework by roofers.

- Welding of the steel frame at height by welders.
- Dismantling machinery in a multi-story building by maintenance workers.
- Painting on the external wall of a building by painters.

Businesses must train their employees to take adequate safety precautions while working at heights to minimize any chances of accidents. To ensure employee safety government has a specific set of legal guidelines in place, namely Work At Heights Regulations 2005 (WAHR).

It can be hard for businesses to height-train their employees while working on their core business activities. It is why they must partner with an expert compliance service provider to ensure their employee safety and avoid liability complications. Office Compliance recently launched a safety program to train employees for working at height.

A qualified trainer from your compliance service provider will attend the site acquainting employees with Working At Heights guidelines. Here is what you can expect from the training program provided by **Office Compliance**.

- Understand the nature of common working at height tasks and the risks associated with them.
- Understand the common factors and negligence that contribute to a person or object falling from a height.
- Understand essential control measures to minimize the risk of falling from a height.
- Understand the proper use of safety equipment at heights to eliminate the risk of falling.

They have been providing **compliance services** in the UK for over 10 years and have helped several businesses ensure a safe working environment for their employees.
