

Why Birdfy Has Long Been Listed As The Top in Amazon Most Wished For List?

Los Angeles, California Nov 16, 2022 ([Issuewire.com](https://www.issuewire.com)) - If you are a frequent visitor to Amazon, you must be familiar with the "Amazon Most Wished for" list. This is a section where Amazon generates items that are most often added to customers' shopping carts. Amazon showcases this list for other similar clients as recommendations for their future shopping.

Remarkably, Netvue Birdfy has long been listed as the top 1 and 2 choices in Amazon's "Most Wished For" list for the wildlife bird feeder section. This means that when customers consider buying a bird feeder, Birdfy is always the one that first pops up in their minds. Wonder the reasons behind that? Read on and explore the charm of Birdfy now!

Three Main Reasons Why Birdfy is Able to Be Ranked Top

When people are searching for wild bird feeders, they basically look for products that enable them to feed birds properly, and probably with certain levels of aesthetics. Specifically, Birdfy not only meets these fundamental needs but also provides various additional values, which create a unique and irreplaceable bird-watching experience for bird lovers.

Reason 1: The Best Solid House for Backyard Friends

When customers consider buying a bird feeder, the first questions they will ask might be: "Is this bird feeder reliable enough for me to put bird food and attract birds? Does it look beautiful to decorate my backyards?" Thankfully, Birdfy solves all these enquiries with a patent bird-friendly design.

Birdfy is professionally designed as a beautiful home for backyard birds. With IP65 weatherproof and a firm stand, Birdfy is definitely a solid house for our feathered friends. The 1.5L large capacity container allows users to store enough food for birds so they don't need to add food frequently. With the perch stand design, birds feel more comfortable standing and having food happily. As such, Birdfy has won the hearts of many bird lovers and become their first choice for shopping.

Reason 2: Non-stop Bird-watching Journey

For every bird lover, attracting birds and watching them react to the food they prepared could be the happiest thing. However, with traditional bird feeders, the user will never be able to watch the visitors closely or capture the moment when they come.

Luckily, they can now see birds clearly with Birdfy's 1080P high-solution camera. Birdfy allows users to get the best shots of images and videos in color even at night. Users can see birds in a selfie-like perspective with an 8X magnification rate to capture close-up details automatically.

Moreover, with a 5dBi antenna setting, the camera supports a more stable 2.4ghz Wi-Fi connection. Another highlight point of Netvue Birdfy is its ultra-strong battery life. Users can also connect Birdfy with Solar Lite Solar Panel and then they can receive 365 non-stop birdwatching journeys.

Reason 3: The First AI-powered Bird Feeder Camera

Although traditional bird feeders allow users to attract birds to the backyard, they can never tell you what the bird is. To solve this problem, Netvue Birdfy develops the very first AI bird recognition platform which enables Birdfy to distinguish 6000+ bird species and share them with the users through the App. Through the Netvue App, users can also receive instant notifications once the birds are detected. This means that users no longer need to stand and wait for a whole day when birds show up and shoot manually, they can just sit at home and receive notifications through simply one click.

Netvue has never stopped improving Birdfy to provide a better birdwatching experience for bird lovers. If you are interested in learning more about Birdfy, you can visit netvue.com for further information.
