

With Transak, users can now off-ramp 40+ crypto assets directly to their bank accounts

The events of recent days have highlighted the importance of functioning and reliable on/off-ramps. Transak, a leading Web3 onboarding infrastructure provider, is taking a step in this direction, announcing the launch of its crypto-to-fiat services.

Crypto to Fiat made easy with Transak's Off-Ramp

Powered by 

Miami, Florida Nov 11, 2022 ([IssueWire.com](https://www.issuewire.com)) - Transak, a leading Web3 onboarding infrastructure provider, today announces the launch of its crypto-to-fiat off-ramping services. It currently supports 40+ crypto assets like Bitcoin, Ethereum, and Solana, and also stablecoins like USDC, DAI, and USDT across multiple chains. Users from UK and EURO supported countries can sell their crypto assets via Transak and transfer funds directly into their bank accounts, making the once multi-step and tiring process, quite seamless.

Transak is one of the first solutions across the industry to enable off-ramping to fiat from 40+ crypto assets, giving users the freedom to move their funds easily. Currently, the process of selling crypto is very long and involves risk. With this solution, a user just needs to access Transak from any of the leading dApps, choose a crypto asset, enter the amount they want to off-ramp, provide their bank account details and make the transaction. This not only enables native users to move their funds but also gives non-native users the confidence in interacting with web3, as now they have a clear path to liquidate their crypto holdings to fiat anytime.

The solution is currently available for all users in the UK and EURO-supported countries but will soon expand to 125+ countries like the US, India, and others that are already supported by Transak through its on-ramp solution.

Recently integrated by AAVE, Transak is already the main choice of user onboarding for Metamask, TrustWallet, Ledger, LBank, Decentraland, Splinterlands, Zed.run, Sushi, Quickswap, and others. Initially released in stealth mode for a few dApps back in July 2022, the solution is now ready for integration by most of Transak's 100+ supported dApps. Roll-out will begin starting this week.

“We are very excited to announce the release of Transak's off-ramp services as we know how important it is for any industry to provide entry and exit options to its users. Without a simpler solution for such transactions, the adoption by mainstream users will always be limited” - Yeshu Agarwal, CTO of Transak

Off-ramp is one of the many product launches by Transak that will be announced over the next few months. Leading the industry to a more simplified version of web3. One where we need to be ready, to onboard billion users and make crypto adoption possible for mainstream users.

To better understand Transak's Off-Ramp solution, join on 24th November 2022 as Transak will host a webinar to provide more details about its features and integration steps. So if you are a builder in web3 and looking for an on/off-ramp solution, then visit transak.com/off-ramp and make sure you register for the session.

About Transak:

Transak is a leading Web3 onboarding infrastructure provider. Its API-driven solutions enable web3 platforms to onboard users to 130+ crypto assets from 125+ countries, abstracting away the complexity of user KYC, risk monitoring & compliance, payment methods, and customer support. Transak's On-Ramp widget can be integrated into an app in just a few lines of code. Transak is backed by top VCs, including Consensys, Animoca Brands and graduated from the Tachyon accelerator program.
