

A Pediatric Dental Clinic That Focuses On Orthodontics for Children in Culver City

Culver City, California Dec 9, 2022 ([Issuewire.com](https://www.issuewire.com)) - The American Association of Orthodontists recommends that every child must be evaluated for orthodontics by the time they are seven years old. This is the right age when a pediatric dentist near you can spot even the slightest tooth problem. Toothopia Dental is a pediatric dental clinic that focuses on orthodontics for children in Culver City.

It is recommended that you begin correcting your kid's dental problems while they are still growing because the moment growth stops, treatment may be more extensive and takes longer.

Most children in the US start active treatment when they are about 9 to 14 years old.

Importance of Early Orthodontics Treatment and How It Will Help Your Child

Orthodontic treatment is vital in promoting a healthy and functional bite. It includes jaw positioning and tooth alignment. For the mouth to function properly, the jaws and the teeth must line up correctly. Orthodontics treatment corrects this anomaly, promoting oral health and general physical health.

The treatment also encourages an attractive smile. Other benefits of [pediatric dental care](#) for kids include:

- Biting and chewing properly
- Assists in clear speech
- Teeth function properly
- Attractive smile
- Self-confidence and self-esteem

Types of Orthodontics Offered at Toothopia Dental

At Toothopia Dental in Culver City, we offer several tooth procedures that give you a perfect smile.

Metal Braces – Our metal braces offer excellent control and are the most preferred because they correct bite problems and realign your teeth faster.

Ceramic braces: They are less painful and more comfortable to wear. Our ceramic braces are not abrasive; therefore, they will not irritate the sides of your mouth or gums like others.

Self-ligating braces: With these, we assure you of shorter dentist appointments. They, too, are comfortable and promise easy cleaning.

Lingual braces: We offer completely invisible lingual braces that are effective compared to traditional ones.

Clear aligners: aligners like Invisalign® are the best orthodontic treatment for kids with the segmented movement of teeth. They promise shortened treatment duration too.
