

BDS-Machines –Helping You Buy Quality, Precise and Affordable Machines Hassle-Free

BDS Machines is the Manufacturer of Heavy-Duty Magnetic Drilling Machines - Lightweight Magnetic Drilling Machine With Keyless, Magnetic Base Drilling Machine With Swivel bases, annular cutters, accessories, and more.

Aurangabad, Maharashtra Dec 15, 2022 ([Issuewire.com](https://www.issuewire.com)) - BDS Maschinen GmbH, whose production site and headquarters are in Germany, is represented, imported, and distributed by BDS Machines Pvt. Ltd. in India. The devoted Sales & Service Engineers, Managers, and Representatives of

BDS Machines Pvt. Ltd. are located throughout India. Their recently opened office and warehouse are both in Aurangabad City and include a contemporary product studio, presentation, and training facility, service center, and a sizable inventory of goods that were all directly imported CBU from Germany.

For more information please visit: <https://www.bds-machines.in>

BDS Machines have the following products:

- **Magnetic Drilling Machines**

When drilling holes in metals, a magnetic drill press is a machine tool equipped with an electromagnet and a cutting tool attachment. The core drill, a type of cutting tool used with magnetic drill presses, features cutting edges on both the surface and the teeth despite being hollow inside. At BDS- Machines you will get the [drill machine at the lowest price in India](#).

- **Annular Cutter**

A specialized bit for drilling into metal is called an annular cutter. An annular cutter just removes the outside edge of a hole, similar to a hole saw for wood. Without pre-drilling or step drilling, it creates precise holes with tight tolerances.

- **Bevelling Machine**

The beveling or chamfering machines are made to bevel or chamfer objects using milling cutters. The preparation of sheet metal pieces for welding requires the use of chamfering and beveling equipment. Sharp edges should be removed for safety and aesthetic reasons

- **Coolants & Lubricants**

Coolant's primary function is to remove the cutting heat produced in the cutting zone and maintain a low cutting zone temperature. The main goal of the lubricant is to lessen the rate of heat generation by lowering the coefficient of friction between the cutter and the chip's rake surface.

- **Drilling Accessories**

Circular holes can be created or enlarged in solid materials using a drill, or a cylindrical end-cutting tool. Drills are typically rotated by a drilling machine and fed into stationary work, however on other types of machines, the drill and work may spin in opposing directions or a stationary drill may be fed into revolving work.

- **Tapping Accessories**

You can tap holes directly in the punch press with unmatched speed and accuracy by using tapping tools. These tools are an obvious approach to boosting productivity and reducing the costs of goods because they are available with tooling options for a variety of machine designs and thread sizes.

- **Bevelling Accessories**

A pipe beveling machine is a mechanical processing device used to shape the ends of pipes or tubes using a cutting tool.

• Clamping Devices

Using pressure from the inside, a clamp is a sort of fastener that is used to tightly hold or bind objects together in order to prevent movement or separation.

So, these are the products they provide at a good price with full assurance of quality and convenience. When you are searching for the [magnetic drilling machine price in India](#), you will find this firm to be at the top in terms of product quality, lifespan, pricing, and customer support.

About BDS- Machines:

In India, BDS Machines Pvt. Ltd. represents, imports, and distributes BDS Maschinen GmbH, which has its production facility and corporate headquarters in Germany. BDS Machines Pvt. Ltd.'s devoted Sales & Service Engineers, Managers, and Representatives are dispersed over India. Get the **best magnetic drilling machine price in India**. Their just-opened office and warehouse are both in Aurangabad City and feature a modern product studio, presentation, and training facility, service center, and a sizable inventory of goods that were all directly imported CBU from Germany. They also both have a warehouse that holds a variety of goods that we recently began selling.
