

Creole Studio has launched a “FREE” Software Development Cost Calculator

A software development cost calculator is one of the fastest ways to receive a rough estimate of software development costs. Answer a few questions, share your details & receive an estimated quote right away in your inbox that too in minutes.

Ahmedabad, Gujarat Dec 28, 2022 ([Issuewire.com](https://www.issuewire.com)) - What is the cost of developing an application or software? Having a [software development cost calculator](#) gets covered everything as it will help estimate project costs right away. As a result, users will be able to understand everything about

customer preferences and budgets. This way, the sales team can easily elicit the pain points of customers and can save a lot of time on sending them those boring emails that they don't even notice. Creole Studios is a young and vibrant creative software development company that released a free-cost calculator.

Development in terms of technology has drastically updated so long as businesses are adopting its benefits. Gone are the days when businesses used to rely on in-person customer interactions and communication. The pandemic was the worst nightmare and also a game-changer, resulting in tech-savvy companies surviving and old traditional companies under the ground.

In today's business world, businesses are trying everything to serve their customers in the best way possible. When entrepreneurs are looking to build an app, they used to explore hundreds of websites to hire someone who can give them a quick and quality service. But they always find companies telling them “**we will get back to them soon**”. This results in nothing but customer disappointment, as they soon never come.

Software Development Cost Calculator can be very useful for businesses that are trying to decide whether it's worth it or not to invest in an app/software. Here are some reasons why people use a software development cost calculator today.

- To get an exact idea about outsourcing companies' business models and decide if the service fits within the target market.
- To get information on software development and know exactly what needs to be done for complete and feature-rich software.
- To estimate how much time it would take to complete specific tasks in software development.
- To discover the right team required for the project.

The Creole Studios **software development cost calculator** is designed to make it easy to calculate the cost of software for anybody. When users select specific information about their requirements in the calculator, it estimates the project costs within five minutes. Here is how it works:

Step 1 - Service selection - When choosing a service, users can select from the pre-approved options for their project.

Step 2 - Platform choice - The next step is to choose the platform the app will be built on (iOs, Android, or a web app)

Step 3 - Choose a domain - When choosing a domain, users can select from the pre-approved domain for their application.

Step 4 - Select screen options - The next step is to choose the screen numbers to ensure how many screens your application will have.

Step 5 - Need wireframe or not - This is where users can select yes if they need a wireframe for the application and select no if not.

Step 6 - Design requirements - Here, users can choose from Creole Studio's design or request a custom design.

Step 7 - Select brand design - This is where users can avail logo, and full branding and choose no or

not sure if they aren't thinking about design branding.

Step 8 - Option to choose admin panel management - Admin panel management will help users manage applications as a system administrator.

Step 9 - Option to choose third-party integration - Choose third-party integration such as Google map, payment gateway, and 3rd party analytics.

Step 10 - Choose reports or analytics - This is where users can get custom reporting about how the system is behaving.

Step 11 - Estimate is prepared - Simply fill in your name, email address, contact number, and project duration to get your final costs immediately in their inbox.

Estimate software development costs for free now!
