

Fiziks launches customized Bsc physics syllabus for 2022-23!

23rd November, New Delhi, India: Fiziks is delighted to announce the launch of its newly coordinated Bsc physics syllabus, which has been coordinated with the physics syllabi, followed by the Central Universities of India.

New Delhi, Delhi Dec 20, 2022 ([Issuewire.com](https://www.issuewire.com)) - Fiziks is delighted to announce the launch of its newly coordinated **Bsc physics syllabus**, which has been coordinated with the physics syllabi, followed by the Central Universities of India. As one of the notable premier institutions of the country that has helped thousands of students crack the modules of physics at the graduate and postgraduate levels

and competitive examinations, this organization has been looking forward to sharpening its teaching standards with every passing year. This new physics package adds another feather to their crown.

The institute has hired some of its best brains to coordinate this syllabus. For reference - the **Bsc physics syllabus** followed by the Central Universities was taken. Amalgamating all the critical topics from their respective syllabus, the coaching institute has created this customized syllabus package so that students from various domains may seek help.

Also, unlike previous times, when the coaching for physics modules was segregated for different universities and zones (as per the coaching class's division) - this is a special package available in multiple batches for the students. So, students from different universities get their set of topics and gain insight from what other Central Universities are teaching (if they have missed out on something).

According to the Founder and Head of the Management Team - *"Our primary focus in compiling this unique [Bsc physics syllabus](#) course is to assist students in getting a more expansive idea of the subject. This will open their horizons for specialization and prepare them for competitive exams in a better manner. We are looking towards expanding their overall understanding and reducing their burden."*

As per the latest news that the company has released through its official channels -

- This, course targets graduate students from Central Universities (categorically 1st-Year students, but 2nd-Year students may also join, and they will be given the materials accordingly). Currently, the company has not specified if they are ready to accept 3rd-Year students.
- Currently, the institution has started 4 daily batches of 2 hours each and 8-weekend batches for its enrolled students. It is looking forward to starting off some more batches in the coming months.
- The course-fee structure has been detailed in their brochure. You will have to check their website for the details.
- There are a series of weekly and monthly tests that the institute conducts to check the progress of the students. If you miss any of them, there's a re-test facility available.
- There are online lecture videos available for the students if they wish to revise any topic post their scheduled classes.
- Before their enrollment, the students must undergo a unique counseling session with the in-house career counselor of Fiziks. This will help them better understand the courses they would enroll in, their batch timings, and their future plans.
- Additionally, students who have further plans to compete in exams such as - NET, GATE, and MSc Entrance for national and foreign universities, would be allocated special revision classes on request.

Thus, on the whole, this course has been categorically directed towards creating students who are competitive in this strain of science compared to their counterparts. As a premier coaching center - Fiziks, since its inception, has cared for the students' betterment in comprehending concepts rather than creating batches of robotic machines who work 9 to 5!

This **BSc physics syllabus** course has been categorically segmented to ensure that the key concepts are explained in detail, helping students grasp the crucial pointers. Far from the rote learning syndrome - professionals at Fiziks individually care for the students and guide them according to their comprehension standards.

About Fiziks - Fiziks is one of the most notable institutions in the domain of coaching for competitive exams. Since its inception in 2008, it has stood firm to its mission of “Educate, Inspire, Connect”. This newly coordinated **Bsc physics syllabus** - has taken a step ahead in guiding the students in the right direction.
