

Huangpu-Mining Announces Potential Supply of Traceable Battery Raw Materials

The business is attempting to increase both its operational and supply capacities

HUANGPU
MINING

Guangzhou, Guangdong Dec 30, 2022 ([Issuewire.com](https://www.issuewire.com)) - Huangpu Mining (ISIN: CN0397106583), a pioneering cobalt mining company in China whose vision is to become a new mining benchmark company, delivering value and tangible benefits to its shareholders, partners, and the community in which it operates, announced today the possible availability of traceable, ethically sourced raw materials for use in lithium-ion battery (LIB) cells that will be created at facilities slated for construction in Guangdong, China.

Huangpu Mining will strive to determine the specifications and conditions for any potential raw material supply to the proposed LIB plants. For instance, the business will take into account cooperative research and development (R&D) projects to modify Huangpu Mining's raw materials' quality, shape, or form for a better fit into the operational units.

The company is excited to talk about how to use [blockchain technology to improve](#) the traceability and transparency of raw materials in the battery supply chain to help document batteries' life-cycle greenhouse gas emissions. The company also plans to discuss R&D projects for the recycling of lithium batteries.

“With a strong focus on responsible sourcing, sustainability, and reducing the negative effects on the environment, Huangpu Mining is among the world leaders in the supply and recycling of battery raw materials. Through the decarbonization of the energy and transportation sectors, as well as by bringing about constructive societal and individual transformation, we share similar goals and support. As a result, we are happy to formalize our commercial partnerships and improve the supply chain for sustainable raw materials”, stated Hu Weiping, Chief Transformation Officer at Huangpu Mining.

A lot of people are interested in low-cost, high-energy-density battery cells that are manufactured with cutting-edge battery cell designs, manufacturing techniques, and renewable energy over time from locally available raw materials. The business recently disclosed a number of first agreements in the form of Memorandums of Understanding (MoUs) for the industrial scale offtake of battery cells in the stationary and marine sectors as well as for the long-term supply of battery materials and manufacturing

tools.

About Huangpu Mining

Huangpu-Mining.com is a pioneering cobalt mining company in China whose vision is to become a new mining benchmark company, delivering value and tangible benefits to its shareholders, partners, and the community in which it operates. The strategy at Huangpu Mining is to explore, develop and refine ethically sourced cobalt within Asia for sale back into the Asian battery market, focusing on its main site in Huangpu, Guangdong. The company's Board and Management teams are a diverse group of experienced mine-builders, mine-operators, financiers, and company-makers, positioning Huangpu Mining to be at the forefront of the cobalt-driven battery movement in the coming years.
