

New Feature Streamlines Workflows in BarCloud Barcode Inventory System

Enhanced User Experience in our Barcode Inventory Software with Seamless Workflows Perfect for Managing Multiple Warehouses

Austin, Texas Dec 13, 2022 ([Issuewire.com](https://www.issuewire.com)) - ASAP Systems of San Jose, Calif. announced the release of a new feature in their [barcode inventory system](#). The new Site Transfer feature includes a more intuitive user experience that streamlines workflows for all users. For those responsible for managing barcoded inventory across numerous warehouses and independent locations, this new feature will make it easier to keep track of stock levels, reduce manual data entry and minimize errors.

The company released the Site Transfer feature as part of an updated version of its [inventory management software](#) to make it simpler for users to quickly and accurately transfer barcoded items between various sites and warehouses. The new update improves navigation and usability for authorized users to see inventory levels in other warehouses and locations as well as easily request inventory to be transferred. This enhancement will also include simplified procedures for an approval process for inventory transfer out as well as transfer in functions.

This feature streamlines workflows by:

- Circumventing time-consuming human and manual interactions in high-volume warehouse

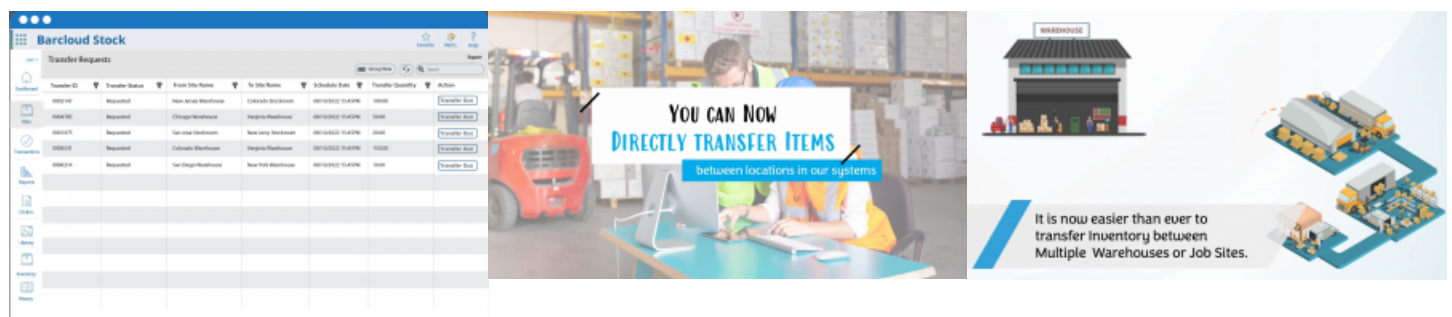

operations

- Reducing time spent on administrative tasks to help ensure that stock levels are managed in the most efficient and productive manner possible.

The Site Transfer feature will also make it easier to monitor inventory from remote locations, allowing managers to track stock levels in real time and make timely decisions regarding inventory management. Additionally, the software has updated advanced analytics, giving users more insight into inventory levels and trends. This helps businesses make more informed decisions to better manage barcoded inventory and ensure all products are readily available when needed. Users will find the latest enhancement as an addition to the traditional transactions in the system, including Sales Orders, Issue Transactions as well as the Receive process.
