

## United Cloud signals regional expansion

One of the Fastest Growing Technological Centers Announced 100 new Hi-Tech Jobs

**Ljubljana, Osrednjeslovenska Dec 10, 2022 ([Issuewire.com](https://www.issuewire.com))** - United Cloud, one of the leading technology centers with 320 employees in five regional and European cities continues growing by doubling its Belgrade resources. This will support the development of a new generation of telecommunication and media products and create 100 new hi-tech jobs by the end of 2023.

From a small team gathered around the vision of next-generation television, United Cloud grew to become one of the leading research and development centers whose products are used by millions. In only five years from the launch of EON TV in 2017, it developed another 10 end-to-end synergetic products that create a multi-service platform as the base for future digital services.

“Industries based on technological innovations have the potential of further growth in the next five years. This brings us an opportunity, but also a huge responsibility to continue creating value for the whole population in the region. The development of our own products provides us with the advantage to lead innovation, bringing global trends into the region. We believe that our next milestone will be the development of a new generation of digital services, with the application of machine learning and artificial intelligence. We continue with the strategy of growth in the years to come, regarding products, human capacities, and knowledge”, said Srđan Đurđević, CEO of United Cloud.

The concept of Belgrade, and, at the same time, the largest United Cloud center was designed to support the needs of leading industry experts working on the latest technologies and hi-tech equipment. The goal is for different teams to have the best possible conditions for work in a state-of-the-art environment, maximizing efficiency, flexibility, and creativity. On the other hand, the space is designed to be a hub of technological know-how, supporting community development through Meetups, education, and continuous learning.
