

Why FlightScope Becomes the Official Golf Launch Monitor of AJGA?

FlightScope launch monitors have become the official launch monitors of the respectable association that trains junior golfers to become professionals.

Boca Raton, Florida Jan 11, 2023 ([Issuewire.com](https://www.issuewire.com)) - As a recent wonderful development, FlightScope has been named as the official launch monitor of AJGA American Junior Golf Association.

AJGA entered an official partnership with FlightScope last year through the year 2023. However, the partnerships have now been renewed up to 2026. Following the partnership, FlightScope launch monitors have become the official launch monitors of the respectable association that trains junior golfers to become professionals. Of course, there are a lot of famous professional PGA players in the industry now, who are also proud alumni of AJGA.

The CEO and Founder of FlightScope, Henri Johnson, proudly states that FlightScope will help young men and women to utilize the powerful data offered by FlightScope Launch Monitors, FlightScope Mevo, Mevo+, and the most modern FlightScope X3.

AJGA also announced that its members can enjoy free testing of MeVo and Mevo+ in its hundreds of annual events and X3 at special invitation events. Also, AJGA members can have special discounts on the purchase of these launch monitors.

Mevo and Mevo+ have been the most popular launch monitors after their initial release back in 2020. Both devices are easily portable and lightweight. For instance, the Mevo+ is smaller than an iPad in size but slightly thicker than the iPad.

While the golf simulator market is being dominated by some high-priced and high-end launch monitors, FlightScope has just started a revolution with its size and its efficiency in collecting shot metrics.

The Mevo and Mevo+ are capable of collecting about 16 crucial parameters of a golf shot that can be used to improve a golfer's swing.

AJGA Chief Business Officer, Jason Etzen, said, Technology innovators like FlightScope have completely changed and improved the way young players learn the game, practice, and prepare for competition. That's totally true. For instance, almost every FlightScope launch monitor uses Doppler Radar technology to track the ball and advanced algorithms to render the shot on the simulation.

The X3 launch monitor is FlightScope's newest addition, which is said to be used by professionals like Bryson DeChambeau and Bubba Watson. Unlike its predecessors, this X3 uses Fusion Tracking in addition to the Doppler Radar. It also comes with environmental optimizer technology.

Like honoring the partnership with FlightScope, AJGA tournaments are to feature a three-shot FlightScope Skill Challenge game.

All three [FlightScope launch monitors](#) are engineers to meet the requirements of all types of golfers such as professionals, golf teachers, amateurs, and entertainment seekers.

FlightScope Launch Monitors are famous and widely used but you might need a detailed review of them

for a better understanding. bestgolfsimulatorforhome.com seems to have reviewed them in a better way; you can take a look at it too.
