

appCURE and AppVentix Partner to Streamline Application Transformation and Delivery

London, United Kingdom Feb 16, 2023 ([IssueWire.com](https://www.issuewire.com)) - appCURE, the industry-leading application transformation and migration solution, and AppVentix, a provider of innovative cloud-native application delivery platforms, are pleased to announce their partnership to bring a comprehensive and efficient solution to the application transformation and delivery process.

This partnership will leverage the strengths of both companies to provide customers with an end-to-end solution that simplifies the migration of applications to modern, secure digital platforms, whether physical, virtual, or cloud-based. With appCURE's unique "Running capture" capability, there's no need for install media, extensive "clean" machine builds, or in-depth application knowledge.

The joint solution will allow customers to rapidly deliver applications, reducing time to production from months to days, and simplifying the application migration process, freeing up IT resources for other projects. It will also improve application compatibility and reduce the risk of application failures and extended project times.

"We are excited to partner with AppVentix and bring our customers the best-in-class application transformation services," said Ryan Mangan CTO of appCURE. "With appCURE's Running capture capability, Extensive transformation portfolio, and AppVentix's cloud-native application delivery platform, we can help organizations of all sizes to modernize their applications with ease and confidence."

"AppVentix is proud to join forces with appCURE to provide a robust, scalable, and flexible platform for the industrialization of application transformation," said Bram Wolfs, CEO of AppVentix. "Our partnership will help organizations to improve their overall productivity, reduce costs, and automate their application delivery process."

About appCURE: appCURE is the leading provider of application migration solutions, helping customers to simplify their application migration to modern workspaces using its unique application capture and delivery capabilities. With appCURE's "on-disk capture" feature, organizations can quickly modernize their applications and support their digital transformation agenda, streamlining the migration process with a comprehensive automation toolset.

About AppVentix: AppVentix is a real-time application delivery platform that provides a scalable, flexible, and efficient solution for application delivery and management in the cloud and on-premises, or even both. Its platform is designed to help organizations automate their application delivery process and reduce the time to market for their applications.
