

appCURE (SSH2apps Ltd) announces appCURE application delivery via VMware Workspace ONE

London, United Kingdom Feb 6, 2023 ([Issuewire.com](https://www.issuewire.com)) - appCURE today released its integration for VMware Workspace ONE. The appCURE team, with help from VMware, has developed the capability and flexibility to package and deliver MSIX applications quickly for customers using Workspace ONE for the modern management of their desktop PCs.

“We have been working with VMware to enable clients, partners, and managed service providers to migrate and modernise their application workloads to MSIX for desktop users anywhere using the Workspace ONE platform,” Steve Horne, CEO, of appCURE. “With the speed of appCURE and the cloud-native modern management capabilities of Workspace ONE, end users can have their applications transitioned at speed and projects completed faster to reduce time and cost to production-ready environments.”

appCURE with this release has added the capability to deliver:

- Convert SCCM Packages into MSIX and migrate to VMware Workspace ONE
- Running capture to MSIX
- 4000+ applications directly package into Workspace ONE
- Certificate creation and package signing
- MSIX Smoke testing

appCURE and its unique CURE (Capture, Update, Remediate & Execute) process allow clients to update older, out-of-support operating systems application migrations to support Microsoft operating systems, whilst future proofing against potential problems and vulnerabilities and significantly reducing project timelines.

Modern management with VMware Workspace ONE allows customers to manage the complete PC lifecycle including deployment and onboarding, policies and patching, software delivery, security, and support anywhere with a leader in UEM (unified endpoint management) software.

“Workspace ONE UEM supports full modern application lifecycle management including the delivery of any type of application to Windows devices. We’re excited to work with appCURE to make the packaging and delivery of MSIX applications faster, simpler, and more efficient for our customers,” Renu Upadhyay, Vice President of Product and Technical Marketing, End User Computing at VMware.
