Noida, Uttar Pradesh Feb 9, 2023 (Issuewire.com) - Appzlogic is organizing a webinar on 18th February 2023 on the video conferencing platform Microsoft Team. The topic of the webinar is Protecting Your Data in the Digital Age: A Webinar on Data Privacy. The webinar will be hosted by Manish Bhardwaj who is the Senior Manager of the Cyber Security Department of Appzlogic.

Registration for the free webinar is open now. Anyone can visit their website and register for the session. The registered user can participate in the webinar from their phone or laptop at 10:00 AM (IST) on Saturday, 18th February, 2022. The keynote speaker, Mr. Manish Bhardwaj is passionate about security analysis, network security, penetration testing, and ethical hacking.

As the problems of cybercrimes are rising; Team Appzlogic has come forward to organize this webinar to make people aware on both personal and organizational levels. Jitendra Sharma, the Digital Marketing Manager of Appzlogic has said; *"We believe, as an IT company; it is our duty to make everyone aware of the potential cyber threats. Phishing is taking a toll on the individual as well as organizational sensitive data related to personal identity and financial records. For that, we are organizing the webinar that will make everyone aware of the potential threats."*

"In this digital age; when most of our daily activities depend on gadgets and applications; we can rarely stay safe from cyber threats. So, we will also focus on the factors like what are the immediate action points for any organization after the cyber attack; apart from preventive measures", he added. The registered users will gain knowledge on data privacy, data security, data minimization, and data encryption.

About the Company: Appzlogic is a leading software development and IT service-providing company. For global clients, they provide an array of services like mobile application development, Google Glass app development, video calling app development, web application development, web development, security testing, automation testing, mobile testing, accessibility testing, network security, cloud security, IoT security, Cloud service, and IT staff augmentation.
