New Delhi, Delhi Feb 13, 2023 ([IssueWire.com](https://www.issuewire.com)) - There are three main types of cells in our blood namely, Red Blood Cells, White Blood Cells, and Platelets. PRP is a reservoir of various growth factors released from platelets that stimulate tissue recovery and healing by increasing blood flow and cytokines release. These growth factors are also responsible for stimulating and enhancing hair follicle function. PRP Treatment in Delhi entitled [Herbal Medicine Clinic](#) provides the Best PRP Treatment in Delhi. Here the cost of PRP treatment is very affordable and provides consistently satisfactory results.

What is PRP?

[PRP Treatment in Delhi](#) is a reservoir of essential growth factors, PRP is typically a concentration of platelet growth factors that can stimulate the hair follicle cells and promote hair growth both in men and women.

How does PRP Treatment in Delhi does for hair loss and hair works?

- PRP therapy is rich in various growth factors
- These molecules bring about the following effects -
- Stimulation of the hair follicular stem cells to convert from their dormant state to an active state
- Stimulation of the growth of blood vessels around the hair follicles
- These physiological effects help in reducing hair fall, increasing the thickness of the hair, and promoting hair growth.

[Who is a good candidate for PRP treatment in Delhi?](#)

Anyone with excessive hair fall, hair thinning, or reduced hair density can undergo [PRP hair loss treatment](#). It is especially very useful and a proven treatment option in cases of patterned hair loss, both in males and females. However, PRP result varies from patient to patient. PRP helps in hair restoration of natural hair by reviving miniaturised hair and preventing the worsening of hair loss.

How much time does it take for each session of prp hair treatment in Delhi?

PRP treatment procedure takes a duration of just 30-40 minutes. A withdrawn blood sample is centrifuged to obtain the concentration of growth factors. The rest of the time is spent performing the procedure.

What should I expect during the recovery period?

There is no downtime after a PRP procedure. You can get back to your routine activities immediately after the procedure.

How many sessions are required for the best results for [prp treatment in Delhi](#)?

On average, 5-8 treatment sessions done 1 month apart are sufficient to give the expected results. PRP is not only effective in male pattern baldness and female pattern baldness but is also used along with hair transplants.

Are there any risks or side effects?

PRP is virtually an “organic” treatment as your own blood is being processed and injected back into your body. So there are no chances of any adverse effects.

However, one may experience mild temporary effects due to the injections per se, which may include slight tenderness and soreness, minimal pain, and pinpoint bleeding in the areas where injections were delivered. You may also experience a feeling of 'tightness' on your scalp for a day after the procedure. A few patients also complain of a headache for a day post the procedure.

What are the advantages of the PRP procedure in Delhi?

The advantages of PRP treatment for hair in Delhi include:

- Minimal after effects limited to slight pain for 1-2 days.
- Very less recovery time. One can resume their daily routine immediately post-procedure.
- Minimally invasive procedure requiring only injections.
- The treatment process is quick and is usually over within 30 minutes to 40 minutes.

How many sessions of prp hair treatment?

A full course of PRP hair treatment in Delhi (generally of 5-8 sessions) can make your hair thick, increase hair growth, and arrest hair loss for some time. The results can be enhanced and maintained with maintenance sessions at intervals of 3 to 6 months one session.

Is PRP hair treatment a permanent solution?

Yes PRP provides permanent results. However, it is never a stand-alone treatment and must always be followed with medical treatment as advised by Doctor.

What is PRP Hair treatment Success Rate?

PRP has shown a 90% to 95% success rate in treating Hair fall and Androgenic Alopecia. Please note that the success of the treatment is not dependent upon the treatment alone but also on the doctor as before starting the treatment right diagnosis of the cause of hair loss has to be made because PRP is not recommended for all types of hair loss.
