

Build A Strong Foundation in The Healthcare Sector Through the Phlebotomy Technician Course by AIHST

Herndon, Virginia Feb 7, 2023 ([Issuewire.com](https://www.issuewire.com)) - American Institute of Health Science and Technology, a forward-thinking, multicultural training institute committed to offering high-quality education at competitive prices to students from all over the world, proudly announces a clear pathway for anyone interested in pursuing a career as a certified phlebotomist. They are trained to collect blood samples from patients and are professionals who assist patients with doctors in diagnosing and treating disease by ensuring that the samples they provide for laboratory analysis are of high quality.

*"Our students receive a unique education from us. In addition to a certificate, our students leave the American Institute of Health Science and Technology with a solid education, professionalism, and exceptional experiences. Our phlebotomist training curriculum at AIHST teaches safe skin-to-pierce methods, blood collection methods, and good interpersonal skills. These learning outcomes are supported by professional standards and critical thinking."*Says Dr. Mahbub Emam Hossain, The CEO of AIHST

AIHST [phlebotomist schools](#) focus on practical training in a lab and clinical training in the community to expand its knowledge base. Blood is drawn from patients at hospitals, blood donation facilities, and diagnostic labs by phlebotomists. For the blood to be used for research, tests, donations, or transfusions, phlebotomists must perform their job. The Phlebotomy Training Program at the American Institute of Health and Science Technology provides instruction in venipuncture methods in addition to tourniquet administration, vein localization, and specimen labeling and storage.

AIHST-trained phlebotomists are the face of the laboratory and they adhere to standards of professional demeanor and behavior. Since phlebotomy also involves direct contact with the patient, they practice

security to protect themselves and the patients they serve. Students pursuing the education required for careers in the phlebotomy fields are allocated to a clinical partner for clinical experience following on-campus phlebotomy classes. This essential component of the program offers a chance to exhibit technical proficiency and useful abilities.

The [phlebotomy technician course](#) is developed for students who wish to work in independent healthcare environments and give patients a fantastic experience. It provides students with the chance to realize their potential in the medical industry while also building a strong foundation for achievement in healthcare.
