

Revolutionize Your Bird Watching Experience with Birdfy Smart Feeder Camera

Los Angeles, California Feb 20, 2023 ([Issuewire.com](https://www.issuewire.com)) - Spring is here, and with it comes the annual migration of birds. This season is a prime opportunity for bird enthusiasts to get out into nature and observe the many species that come through their area. However, traditional bird watching methods can often be limited and unsatisfying, with only brief glimpses of birds through binoculars or in the distance. But now, bird lovers can revolutionize their bird watching experience with Birdfy Smart Feeder.

- **Watch Birds On Your Phone Anywhere, Anytime** - With Birdfy, you can watch birds up close and personal on your phone, anywhere and anytime. The smart bird feeder camera automatically captures and identifies all of the birds that come to your feeder and sends real-time notifications to your phone app. Say goodbye to brief glimpses and hello to a full, immersive bird watching experience.
- **Smart AI Identifies 6000+ Bird Species** - Birdfy is equipped with a world-leading AI algorithm that can recognize over 6000 types and species of birds. The recognition results are then available on the Netvue app, providing a wealth of information about the species you are observing. The AI even accurately identifies squirrels, so you can drive them away with a flashlight, siren, or simply speak through the microphone.
- **See Birds Clearly with 1080P Color Night Vision** - The 1080P high resolution allows for clear images and videos in color, even at night. With 8X magnification, you can capture close-up details such as feathers, and the 5dBi antenna ensures a stable 2.4GHz Wi-Fi connection, so you never miss a moment of your feathery visitors.
- **Patent Bird-friendly Design** - Birdfy is designed with birds in mind, with a beautiful birdhouse-style appearance and an IP65 weatherproof exterior. The 1.5L large capacity container can store enough food to attract a variety of birds, and the weatherproof design prevents mold from forming.
- **Free Storage and Sharing of Bird Photos and Videos** - Birdfy will automatically capture images and videos of the birds and store them in the Netvue Cloud for up to 7 days for free. You can easily extend the storage through subscription or by using an SD card. The stored content can be organized and admired on your smartphone, tablet, or computer, and shared with friends and family.

In conclusion, Birdfy Smart Feeder Camera is the perfect gift for bird lovers, offering an upgraded bird-watching experience that is both immersive and educational. Say goodbye to binoculars and hello to the joys of spring in your backyard with Birdfy.
