

The Leading Web development company Codebuzzers technologies develop an eCommerce website for NEUVILLE

NEUVILLE comes to Codebuzzers technologies, the leading web development company with their unique requirement of an ecommerce website.

kolkata, West bengal Feb 6, 2023 ([Issuewire.com](https://www.issuewire.com)) - [NEUVILLE](#) comes to Codebuzzers technologies, the leading [eCommerce web development company](#) with their unique requirement of an e-commerce website. NEUVILLE needed a new e-commerce website to sell their unique and stylish handbags and wallets for women online. Codebuzzers helped the company create a user-friendly platform and easy to find all of their products. The web development team of Codebuzzers synchronized NEUVILLE's inventory with a third-party distributor, enabling the company to store its product off-site and integrate with cost-effective shipping options.

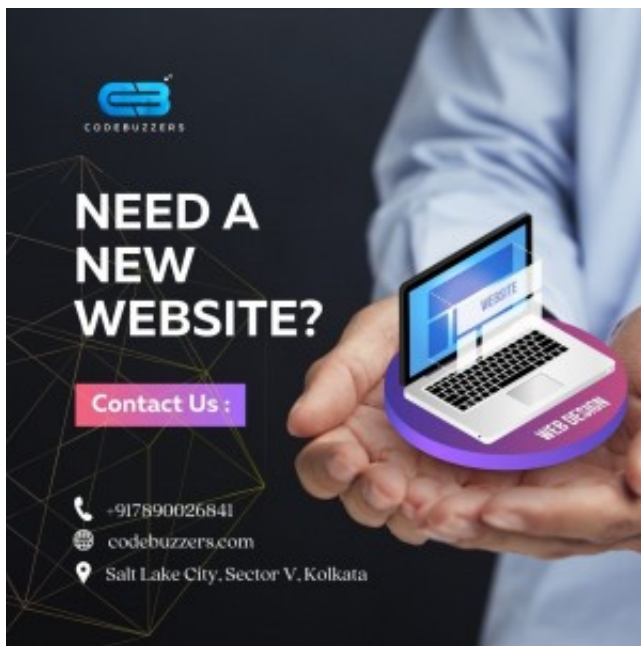

The main problem that drove the client to this project's idea of **eCommerce web development** was the post-pandemic situation. The worldwide situation with COVID-19 led to the lockdown and fear of appearing in public places, especially in transport and offline stores. Online orders boosted in many industries, including retail. Therefore, NEUVILLE appeared as an independent online bag store to protect people from risks they could take in public places.

The biggest challenge the web development team faced with this project was its deadline. The team had 4 months to complete the goal. Four months for ultimate website development and effective UI/UX design. The timeline was this short due to the urgency of the entire situation – the need for a really good online store was incredibly high. The client needed a reliable development and consulting team to beat competitors and enter the market when it's what customers need. To be ahead of competitors, NEUVILLE should have a killer feature.

As the system uses extra services, the team conducted a lot of work on choosing proper third-party vendors to integrate their solution quickly and properly. That includes integrating a payment system, stock control and accounting systems, and a 3rd-party delivery system.

The team of developers should not just integrate the site with some online retail sites but should provide a complete eCommerce solution—the delivery and stock control modules into a single solid system that covers all business needs.

NEUVILLE eCommerce website has an advanced CI/CD solution that provides uptime and easy delivery of new features and updates. The PWA integration provides a smooth experience for mobile users. The results show that the Codebuzzers development team knows how to start an online store.
