

AgTech OS Inc. Seeks Alternate Location for Palouse Region Operation

Spokane, Washington Mar 21, 2023 ([IssueWire.com](https://www.issuewire.com)) - AgTech OS Inc. announced today that they have decided to seek an alternate location for their proposed biodiesel operation and will not occupy the site proposed by the Port of Whitman near US 195 and SW Old Wawawai Road in Pullman, WA.

The Port of Whitman voted on March 2nd to move ahead with their plan despite strong opposition voiced by the community in an informational meeting held on March 1st. The Port has submitted a request to the City of Pullman to rezone the land from residential to Industrial Research Park (IRP) and commercial zoning to build an agriculture advancement campus with AgTech OS Inc. as a potential tenant.

“Whether or not the Port’s current plan will be successful or not, we don’t know. What we do know is that the current proposed location has created overwhelming negative sentiment due to its proximity to the residential areas of Pullman. For that very reason, we will seek a more suitable location for our operation.” said Ernest Spicer, CEO of AgTech OS Inc. “We are very excited about the opportunity to bring a clean, renewable, and sustainable ag-based industry and many new jobs to the region, and will seek a more appropriate location to do so.”

About AgTech OS Inc.:

AgTech OS is a value-added sustainable agriculture technology company at the intersection of traditional farming operations and advanced computer modeling and simulation systems. At its core, the company is positioned to improve the operational economics of agricultural producers while enabling the decarbonization of farming operations. To meet these ends, AgTech OS is focused on oilseed crops and their utilization to produce feed additives, biodiesel, and organic specialty chemicals. The company’s website is farmfuel.tech.
