

Fynd's data ops platform Boltic launches Text to Query feature for revolutionary data exploration

Reliance-backed Fynd's big data ops platform Boltic is set to improve productivity, accuracy and data access for businesses with a new feature

Boltic

Mumbai, Maharashtra Mar 13, 2023 ([Issuewire.com](https://www.issuewire.com)) - [Boltic](#), the modern enterprise-grade data platform, has announced the launch of a new feature called Text to Query, which enables users to search for information by converting natural language text into structured queries.

[Boltic](#), launched in 2022, saw tremendous traffic from across the globe. It is designed to simplify work and make it more efficient with automation, an intervention benefitting people working with vast and varying data sets.

The Text to Query feature is powered by GPT 3 integration and AI, which enables users to search for complex queries and get accurate results without the need to know how to write complex database queries. This feature is particularly beneficial for those searching for information in a database, conducting research, or analyzing large datasets.

With the help of AI and natural language processing techniques, users can enter a sentence or phrase into the text box, and Boltic will automatically generate a structured query that captures the intent of their text. The GPT 3 integration is trained on a vast amount of text data, which Boltic has leveraged in its system.

"Text to Query is a game-changing feature that empowers users to generate queries using natural language text. It eliminates the need for traditional query writing and saves time by auto-generating queries." said Farooq Adam, co-founder of Fynd.

Built for businesses of all sizes and industries, Boltic's innovative solution enables companies to harness the power of data to achieve their goals. Users can try Boltic's Text to Query feature to

experience the power of natural language processing in action, thanks to generative AI. The feature is available now on [Boltic's platform](#).
