

# Hidoc Dr. introduces AI-powered 'Ask Me Anything' feature to revolutionize medical research

Hidoc Dr. - The #1 Medical App for Doctors - has taken a step forward to harness the power of GPT-3 (ChatGPT) to provide a best-in-class tool assisting Doctors in providing diagnosis to patients across the globe.

**Pune, Maharashtra Mar 11, 2023 ([Issuewire.com](https://www.issuewire.com))** - Technological advancement has always had an impact on medical science, and correspondingly, on the medical field. One such technology that is making waves in healthcare is GPT-3, a cutting-edge language model developed by OpenAI. GPT-3 is an artificial intelligence (AI) language model capable of generating human-like responses to questions. It has been trained on a massive corpus of data, including medical literature, enabling it to generate text that is indistinguishable from that written by a human. With its ability to comprehend natural language and generate responses that sound human, GPT-3 has quickly become a game-changer in the field of conversational AI.

[Hidoc Dr. Web App](#) has taken a step forward to harness the power of GPT-3. The healthcare platform for medical professionals has always endeavored to use technology for the greater benefit of the medical field. In yet another attempt, it has announced the introduction of its AI-powered 'Ask Me Anything' feature. The platform utilizes GPT-3 technology to provide instant, well-researched answers to medical professionals' queries.

The 'Ask Me Anything' feature is designed to revolutionize healthcare research and education by providing medical professionals with easy access to the latest medical information. By utilizing GPT-3 technology, the platform can provide instant and accurate answers to queries, enabling medical

professionals to make informed decisions in real time.

Benefits of the Ask Me Anything feature:

The 'Ask Me Anything' feature has been created to become a valuable resource for medical professionals, by utilizing the GPT-3 technology. Some of the ways it hopes to empower medical practitioners are:

- Instant access to well-researched medical information: A particularly helpful feature in situations where a quick decision needs to be made based on the latest medical knowledge.
- Enhanced accuracy: Being trained on a wide range of medical sources, GPT-3 allows the platform to provide accurate answers to queries, improving the quality of care provided to patients.
- Timesaving: By providing instant answers to queries, the feature saves medical professionals time that would otherwise be spent on conducting research.
- Improved patient outcomes: By enabling medical professionals to make informed decisions based on the latest medical information, and improving the quality of care provided to patients, it can also lead to improved health outcomes for the wider population.
- Self-improvement ability: The more the Ask Me Anything feature is used, the more accurate and comprehensive its responses become. This means that the feature responses become more helpful and relevant as it learns from interactions with medical professionals, making them an even more valuable resource over time.
- Easy access to the latest medical information: By helping them stay updated with the latest developments in their field, the feature can be really helpful for medical professionals who need to stay informed about new treatments, drugs, and medical research
- Increased efficiency: The feature enables medical professionals to find the information they need quickly and easily, improving their efficiency and productivity

Moreover, GPT-3's ability to remember conversations means that it can provide personalized recommendations and insights based on past interactions. For example, if a medical professional has previously asked the bot about a particular condition or medication, the bot can use that information to provide more tailored advice and recommendations in future conversations. This personalized approach can be especially helpful in complex medical cases where an individual patient's needs and circumstances must be considered.

Why This Feature?

[Hidoc Dr.](#) has always aimed to use technology to help doctors and other medical professionals in their daily work by providing access to the latest medical information, educational resources, and tools for communication and collaboration. By using technology in these ways, Hidoc Dr. aims to improve the quality of care provided to patients and help medical professionals stay informed, connected, and effective in their work.

The 'Ask Me Anything' feature is yet another way Hidoc Dr is using technology to help medical professionals, in line with our vision to make life easier for our frontline defense force against illness of any kind. The platform's focus is on delivering high-quality information and resources to doctors promptly and effectively, and GPT-3 is the perfect tool to achieve this.

*"Hidoc Dr is committed to using technology to help medical professionals deliver better patient outcomes," said Dr. Rajesh Gadia, Founder and Managing Director, HiDoc. Dr. "Our AI-powered 'Ask*

*"Me Anything' feature is just one example of how we are utilizing the power of technology to improve healthcare research and education."*

With its innovative GPT-3 technology and commitment to improving healthcare outcomes, Hidoc Dr. is set to revolutionize the way medical professionals access and utilize medical information.
