

Introducing DogQ – a No-Code Testing Tool That Makes Testing Available for Everyone

The launch of DogQ, the new no-code automation testing tool, was announced today at the Product Hunt. The app is suitable for both beginners and professionals and is equipped with a bunch of cutting-edge features for creating various types of tests.

Create → Run → Track

Create no-code tests for your web product using pre-build steps.
No extensions. No installs. Enjoy **cloud-based** infrastructure.

San Francisco, California Mar 17, 2023 ([Issuewire.com](https://www.issuewire.com)) - DogQ Overview

[DogQ](#) is an easy-to-use test automation tool with a user-friendly interface and intuitive design. With DogQ, customers can quickly test software with multiple scenarios with no coding - only a minimum of tech knowledge is needed.

The product allows users to run multiple test cases in the cloud and manage them directly through a custom-built interface. The tool uses AI-based text recognition technology that works for you automatically and provides you with 100% readable and editable test results. Moreover, test cases and scenarios can be run simultaneously, scheduled, edited, and then easily reviewed by non-technical team members.

DogQ also provides customers with visual analytics and reporting features, as the future is all about data and clear dashboards. All the functionality is available starting from day 1. The company also highlights that it will support startups with a customized subscription plan if they need such for testing their products.

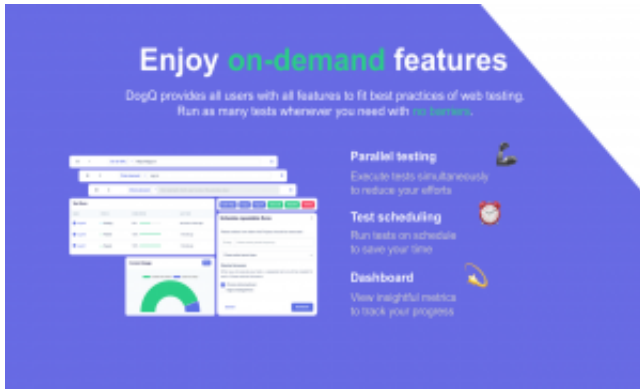

Bullet facts about how you can use DogQ

- Simulate real user actions using multiple pre-built test steps
- Run tests in multiple browsers in the cloud
- Launch tests simultaneously in parallel or in a specific order
- Schedule your tests to receive constant notifications
- Change and embed your tests into other scenarios
- Control your effectiveness with visual reporting
- Team up with other creators to distribute your workload
- Use the power of AI-based keyword search
- Enhance your development pipeline and trigger tests from it
- Enjoy all DogQ features starting from day 1

“As a tech specialist, I always had a deep need to build a product that will help people, solve real problems, and be something I would use myself. After more than two years of research, development, and testing, we created DogQ – a no-code testing solution suitable both for beginners and professionals. With DogQ, we want to provide everyone with equal opportunities for testing and help individuals, companies, and startups worldwide ship better-tested and less-buggy applications”, –
CEO at DogQ, Alex Zaytsav.

DogQ is ideal for beginners, freelancers, startups, and small companies, as it has a variety of suitable cost-effective pricing plans with no loss in functionality. It also can be a good fit for skilled QA engineers, as they can build test scenarios for UI, e2e, regression, functional, and other types of web testing using DogQ.

DogQ was founded by Alex Zaytsav in 2021 and has since then grown into a promising no-code automation testing startup. DogQ works both with individuals and companies, actively supporting their no-code testing activities with individual approaches and custom subscription plans to provide everyone with equal opportunities for testing. The DogQ company is located in San Diego, CA, USA.
