Now as the sales of Magicycle e-bikes have expanded, many people turn to electric bikes to gain an incredible riding experience.

Among those e-bikes that top the buy list, long-range e-bikes always come in the first place. Obviously, the need to go out for long distances on e-bikes is increasing. And for many riders, an electric bike with a regular range is not necessarily enough for their daily commuting, or they just don't like recharging the battery too often.

Whatever the reasons are, long-range e-bikes are really taking off in the e-bike market. They are not merely e-bikes with a longer range, they are designed to extend the pleasant riding experience. The Magicycle Ocelot Pro is equipped with a 52V 20Ah battery, giving an expanded range for riders who love to explore around and enjoy e-bike rides. With a battery of 20 amp hours, riders can look forward to an incredible range of up to 60 - 80 miles. This range variety brings a lot of options. When it comes to commuting on the Ocelot Pro, riders can cover a long distance without worrying about running out of battery, which is kind of awkward. Also, a long range enables riders to see more sights around without getting tired.

What is more special about this large battery is its voltage. A 52V battery means a lot. First, it delivers better efficiency, granting more power to the bike itself. Second, as a 52V e-bike battery can work more efficiently, it will lead to fewer battery losses and more power output.

Comfort

Moreover, the Magicycle Ocelot Pro doesn't only provide long range, but some other great features, among which is comfort. The Ocelot Pro comes with a step-through frame design. Compared with Magicycle's cruiser series, the Ocelot Pro is in a more friendly size of 20".

Unlike most step-through frames on the market, the frame of the Magicycle Ocelot Pro is specially designed by Magicycle Team based on ergonomics for riders to get the maximum comfort out of long-distance e-bike rides.

The step-through frame of the Ocelot Pro makes it easier for riders of all ages and abilities to get on and off the bike, especially for those with leg or knee issues. Also, it can reduce strain on the lower back, neck, and wrists, and grant a much more comfortable riding experience.

Power

Even though the Ocelto Pro looks a little bit small in size, it is absolutely big in power. It comes with a 750W motor, which can reach a peak power of 1100W. The Magicycle factory tweaks this motor to increase the torque to 96Nm, which means very much for an [electric bike for adults](#).

With the 96Nm, the Ocelot Pro is able to get a greater acceleration, meaning a higher speed. When it comes to climbing hills, the high torque output also makes it easier for the Ocelot Pro to climb steep hills and mountains, allowing riders to be confident on challenging routes. Also, a higher torque brings a larger load capacity as an e-bike with such torque can handle heavier loads and cargo.

Final Words

The Magicycle Ocelot Pro is a perfect solution for riders who love to travel long distances. Also, it has many other features that make it suitable for riders of all ages. For those who are looking for an affordable premium e-bike, the Ocelot Pro is definitely worth considering.
