

Nisene Technology Group, Inc. Is Here To Offer Circuit Decapsulation Systems Analyse Failure of Decapsulation ICs

The leading innovators, Nisene Technology Group, unveiled JetEtch Pro for people needing decapsulation ICs.

Watsonville, California Mar 16, 2023 ([Issuewire.com](https://www.issuewire.com)) - Nisene Technology Group, Inc., leading IC decapsulation experts, is proud to announce the introduction of its new circuit decapsulation systems used in the failure analysis of encapsulated integrated circuits. These systems are designed to help decapsulate ICs using a chemical solution quickly and accurately, ensuring that their products are always functioning optimally. The [decapping tool, JetEtch Pro](#), is a highly efficient and cost-effective way for companies to test their ICs for any potential problems before they reach the market. With this new technology, Nisene Technology Group, Inc. continues to provide innovative solutions.

The industry-leading decapsulation system, JetEtch Pro is an innovative and reliable solution for IC decapping. This patented pump has been designed to provide a robust and efficient decapping process. It also features an advanced heat exchanger that ensures safety during the decapping process and helps reduce energy consumption. This system is also equipped with advanced software that makes it easy to use and provides next-gen features such as automatic temperature control, real-time monitoring, and error logging. With its user-friendly interface, this system is the perfect choice for any IC decapping project.

The decapsulation IC is the next generation of technology that offers industry-leading features and affordability. This decapping tool is intuitive and requires minimal heat usage, making it a favorable choice for many industries. Additionally, the industry-leading warranty ensures that one gets the best value for their money. With this decapping IC, anyone can be sure that their investments are secure and they will get reliable performance over time.

This tool is designed to quickly and efficiently remove the encapsulation from integrated circuits, allowing for easy access to the IC's components. JetEtch Pro is a familiar tool for many in the industry, as it has been around for quite some time. However, with its recent upgrade, JetEtch Pro offers new features that make it even better than before. Not only does it offer faster decapping times and higher yields, but its intuitive user interface makes it easy to use for both experienced and novice users alike. With its improved features and user-friendly design, JetEtch Pro is still one of the best decapping tools on the market today.

The company's CEO said, "We are excited to launch the new JetEtch Pro. The tool will revolutionize the way businesses create, store, and access digital documents and files. With its advanced features and user-friendly interface, JetEtch Pro will make it easier for businesses to stay organized and productive."

Nisene Technology Inc. is a firm that specializes in decapsulation systems and services for businesses. With the help of its advanced technology, it can provide businesses with reliable and efficient solutions that can help users save time and money. By visiting its website, businesses can get in touch with Nisene Technology Inc. for all their decapsulation system needs.

[About Nisene Technology Inc.](#)

Nisene Technology Inc. is the world leader in automated decapsulation and was founded in the 1970s and is known for its amazing innovations.
