

Shenzhen H-One – Induction Cooktop 2 Burner Supplier Bringing More Possibilities of Convenience and Energy Savings

Shenzhen, Guangdong Mar 22, 2023 ([IssueWire.com](https://www.issuewire.com)) - Shenzhen H-One is a premier OEM EMC induction cooktop supplier, known for smart induction technology and infrared heating with multiple functions to meet market requirements. Their built-in induction cooktop series has gained a lot of attention lately due to their advanced customizable experience and intelligent equipment. It is H-One's first and most recognized ODM product that can reduce energy consumption and bring ample opportunities to make your life easier, smart, and safe. The company is focused on research and development, induction heating technology, precise temperature control, and motor driving control. To know more, please visit: <https://szh-one.com/>

Whether you own a restaurant or cook at home, it's time to upgrade your culinary experience with a built-in induction cooktop. A 2 burner induction cooktop has independent LED display and heating zones that allow you to cook multiple dishes simultaneously. The sensor touch control has different levels of power, is made of durable material and resistant to scratch, and high temperature, and ensures easy cleaning after cooking. Smart induction cooktop series usually come with advanced features like a child safety lock, a timer, and an overheat protection device to extend the service life and make the cooking job easier.

Shenzhen H-One is a leading [induction cooktop 2 burner supplier](#) bringing advanced technology and well-researched products to ease your culinary experience at all times. A Chinese ODM company, established in 1993 is widely serving in Shenzhen, China with a constant focus on different control systems, smart motor function, infrared heating technology, and precise temperature control. The built-in induction cooktop is one of their best-selling products. They also supply the finished product, PCBA, and SKD parts and accept any customization requirements to exceed customers' expectations.

The company has its own R&D team, purchasing team, production, and quality check staff, so you can design, purchase products, and enjoy hassle-free customer support. They are an expert [built-in vitroceramic hobs supplier](#) that adopts the principle of infrared heating technology and generates heat via nickel-chromium wire. They are also known for offering built-in electric cooktops, smart appliances, and PCBA controllers for mass production or assembly support. As technology advances, the entity has curated three main product series: built-in hobs, sous vide cookers, and smart curtain robots. They have built cooperated projects in other segments and continue to bring smart cooking concepts.

About Shenzhen H-One:

Shenzhen H-One is a Chinese ODM and expert on induction heating, resistance heating, temperature control, and motor driving technology for home and kitchen appliances. Founded in 1993 and with diverse experience and expertise, they have built a large production center equipped with an automatic assembly line to provide more choices on different budgets and needs.

The product range includes built-in hobs, sous vide cookers, smart curtain robots, built-in induction, ceramic hybrid hobs, and built-in vitroceramic hobs. The company has passed ISO 9001:2015 and adheres to the highest standards to deliver different solutions in the market.
