Does Bug Bulb Really Work?

According to the official site, BugBulb employs the patented flash beam technique to repel mosquitoes and insects. The device uses electrical energy as well as light to draw insects. When the insects are in contact with the appliance they're struck by a powerful electrical current. It is equipped with a precise 360deg wavelength of UV that attracts bugs and mosquitoes.

Step 1. Attracts attracted insects BugBulb makes use of UV blue light that has 360 nm wavelength to attract insects and mosquitoes towards the center of the bug. 2. Zaps the lamp that zaps has high voltage, so insects and bugs instantly get removed without sound or smell when they get to the center. 3. Collection In addition to killing insects, BugBulb has a collection tray that is easily empty.

Why Is Bug Bulb The Best Zapper For Curbing Mosquitoes?

All readily available BugBulb confirm the fact that this mosquito zapper is equipped with a few unique attributes that set it apart from all other zappers. One of the advantages that bug bulbs possess is the fact it kills mosquitoes fast with its patented flashbeam technology. In contrast to the conventional zappers, which require a long time to kill these annoying mosquitoes or even end their lives, bug bulb removes mosquitoes from your surroundings in just a couple of minutes.
