

Green Shine Worldwide Professional Ecofriendly Detailers Franchise Opens in Mumbai

Grand Opening

Miami, Florida Apr 10, 2023 (Issuewire.com) - Green Shine Worldwide Ecofriendly Professional Detailers is proud to announce its first location in Mumbai, India.

Waterless System Saves the Planet & Runs Circles around the Competition

With locations from North America to Dubai, this waterless car wash franchise boasts the best waterless products and services on the planet, claiming to be superior even to its H2O-consuming counterpart. All this while saving the planet? Seems too good to be true right? Try to tell that to Green Shine's thousands of satisfied customers who have opted out of the traditional car wash and have taken the initiative to help save the planet's resources one perfectly glossed-out ride at a time.

For the past 18 years, Mr. Juan Pablo Sagastume CEO, and his team of mad scientists have been working tirelessly on new detailing and a nano-ceramic line of products to add to the Unique Waterless Smart liquid carwash. Products that utilize all organic and eco-friendly compounds for every aspect of the detailing process. Head lens clearing. Check. Trim restoration. Check. Engine detailing. Check. Wait, what? That's right, Green Shine will even have the engine bay looking spic and span for the more discerning car connoisseur. Those are just a few of the services you can choose from within the Green Shine arsenal.

Although Green Shine might match the "big business" profile as a franchise with locations around the globe the company stays true to its mantra "Clean your car & save the planet" and that is exactly what this company is trying to do. Your average wash can use anywhere from 15 to 100 gallons or more per car and here in the United States with our view towards water being rather trivial, we do this 1-4 times per month per car without batting an eyelash. Compare that to areas where water is almost as important as blood to some of its residents, they cannot afford to have such a precious resource being wasted on menial things such as a car wash. This is why Green Shine is taking the initiative to target investors in many countries to aid in the conservation of water. The hope is that traditional car washes, especially in areas facing water crisis are done away with in turn for more water-conserving alternatives such as Green Shine which are cheaper to run and more profitable for the owners.
