

Interceptive Orthodontics: The Future of Orthodontic Treatment for Children and Teens

Interceptive Orthodontics is an innovative method that allows orthodontic treatment to begin at an early age, before all permanent teeth have erupted.

Roseville, California Apr 12, 2023 (Issuewire.com) - Dunn Orthodontics is pleased to announce the launch of our new Interceptive Orthodontics program, a revolutionary approach to orthodontic treatment for children and teens.

Interceptive Orthodontics is an innovative method that allows orthodontic treatment to begin at an early age, before all permanent teeth have erupted. This proactive approach focuses on identifying potential orthodontic problems early and correcting them before they become more serious and more difficult to treat.

With Interceptive Orthodontics, children and teens can avoid the need for more invasive orthodontic treatments, such as braces or clear aligners, later in life. By addressing problems such as overcrowding, bite issues, and uneven spacing early on, we can help our patients achieve a healthier, more attractive smile with less discomfort and in less time.

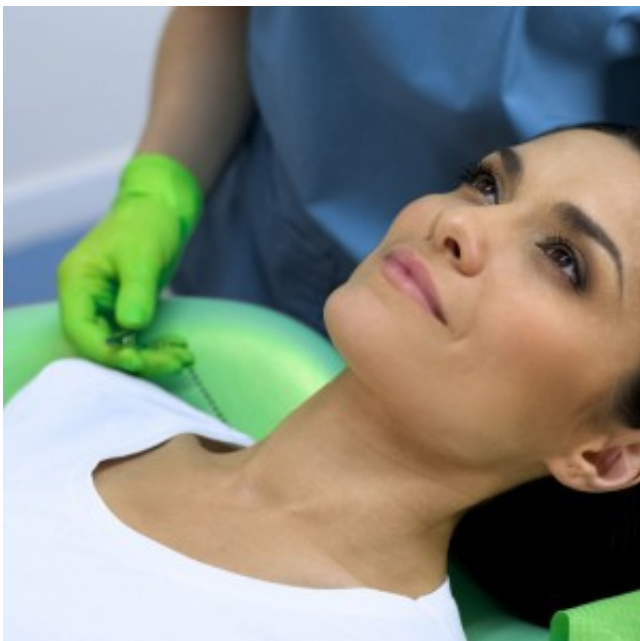

Our Interceptive Orthodontics program is led by a team of experienced orthodontists who specialize in this field. They work closely with patients and their families to create a customized treatment plan that is tailored to their unique needs and goals.

"We are thrilled to offer Interceptive Orthodontics as a new option for our patients," said Dr. Marc Dunn of Dunn Orthodontics. "This approach not only improves the long-term health and appearance of a child's teeth but also ensures they have the best possible experience with orthodontic treatment."

Call us at +91 916-788-0202 if you want to find out more about our Interceptive Orthodontics programme or arrange a consultation. We look forward to assisting your child in developing a radiant, healthy smile.
