

New myMcmtech Mobile App Takes Mission-Critical Asset Management to New Level

Birmingham, Alabama Apr 17, 2023 ([Issuewire.com](https://www.issuewire.com)) - The developer of public safety's premier asset, inventory, and work order management software has even further innovated this space with the release of its **myMcmtech** mobile app, connecting users to mission-critical management solutions right from their pockets.

Tracking, managing, and maintaining mission-critical assets and inventory requires a higher level of functionality and reliability than traditional tools like spreadsheets and binders. Mcmtech's solutions are specifically designed to meet those needs so that public safety agencies, as well as other industries managing performance-vital equipment, can easily and intuitively optimize the life and use of serialized assets and consumable inventories.

Managing these items is now even easier with the new [myMcmtech mobile app](#), which lets users interact with their Mcmtech solution through readily available mobile devices. Working closely with their customers, the app's developers designed it around the functionalities most useful on the go, such as equipment audit check-ins, item/work order requests and fulfillment, screen signature capture, and mobile camera barcode screening.

"There is little to no room for error when it comes to mission-critical asset management," says President and CEO Tom Bartels. "Our goal has always been to make the vital role of tracking, managing, and maintaining this equipment easier to do, with more reliable, longer-lasting outcomes. This app makes it *even easier* to take our solutions out into the field where assets and inventory freely move, thereby

streamlining the capture of comprehensive data on mission-critical pieces.”

The myMcmtech mobile app is one of several innovations Mcmtech has contributed to asset management, which also includes the only integration available today between asset and inventory management and radio communications systems. This integration is what makes Mcmtech the leading provider of asset, inventory, and work order solutions for public safety agencies.
