

## PONG Heroes Sees Surge in Interest in 8-bit Graphics with Nakamigos' Success

**London, United Kingdom Apr 5, 2023 ([IssueWire.com](https://www.issuewire.com))** - PONG Heroes, a blockchain-based gaming platform, has taken note of the recent surge in interest in 8-bit graphics following the success of [Nakamigos](https://www.issuewire.com), a non-fungible token featuring 20,000 pixelated characters. Named after Satoshi Nakamoto, the founder of Bitcoin, Nakamigos has quickly become a hit among collectors and enthusiasts alike, thanks in part to its links to Mfers artist Sartoshi.

As a result of this renewed interest in pixel graphics, PONG Heroes sees this as an excellent time to showcase their classic PONG game, complete with its 8-bit characters. PONG Heroes is the world's first-ever blockchain-based multiplayer arcade platform that combines the classic gameplay of PONG with NFTs, offering players the chance to own and trade unique in-game assets.

PONG Heroes is thrilled to see the resurgence of 8-bit graphics in the web3 space and encourages gamers to try their hand at the PONG Heroes game, where they can experience the retro charm of classic arcade games combined with cutting-edge blockchain technology.

"We're excited to see the renewed interest in pixel graphics and the unique value they bring to the web3 space," said Henri, CEO of PONG Heroes. "We believe our game will appeal to gamers and collectors, and we're thrilled to offer an exciting and engaging experience to players around the world."

Jonathan Pullinger, Managing Partner at [W3S group](#), our new marketing partner, said, "I have always loved the nostalgic feel of 8-bit graphics; I grew up in the NES/SNES era - so [retro games](#) like these have a very special place in my heart."

PONG Heroes is currently available on the BNB blockchain, and interested gamers can learn more by visiting the official website at <https://pongheroes.io/>.
