How Algorithmic Cryptocurrency Trading Platform AESIR Promises to Revolutionize Trading

As cryptocurrency trading bots are becoming more popular, AESIR releases a platform dedicated to bridging the gap between Retail Investors and Wall Street.

Los Angeles, California May 29, 2023 (<u>Issuewire.com</u>) - AESIR Cryptocurrency Trading Platform Makes Debut, Sparked from Reddit Community

A team of six dedicated individuals today announced the official release of AESIR, a cutting-edge cryptocurrency trading platform. This revolutionary project originated within a lively subreddit conversation in March 2021, during a period of unprecedented cryptocurrency market growth.

After more than two years of development and Beta Testing, the highly anticipated release of <u>algorithmic cryptocurrency trading platform</u> AESIR finally makes its debut today!

"As the crypto market boomed, we observed the occasional coin outperforming its peers significantly," said the AESIR team. "We asked ourselves — what if we could predict these surges and capitalize on them? What if we could determine the volatility threshold that triggers these significant gains?"

The concept initially gave birth to the Binance Volatility Bot, a simple <u>cryptocurrency trading bot</u> designed to help traders identify surging assets, follow the uptrend, and sell at the apex. Its efficacy depended largely on users' patience and the optimal configuration of two main parameters: Price Change and Timeframe. However, despite its potential, the bot remained inaccessible to many, given the programming knowledge required to set it up and operate it.

"That's what gave us the idea to ahead and build a fully-fledged web application. We wanted to allow users take advantage of this novel trading style, by adding a nice visual interface to it." Said one of the

co-founders. "While working on AESIR, we came to grasp the immense scale of our ambition," the team recalls. "Transitioning from a local Python script to a comprehensive web app necessitated a complex tech stack, including a database, API, front-end, back-end, infrastructure, and more."

Despite the occasional team tension and daunting workload, our algorithmic cryptocurrency trading platorm AESIR began to take shape, evolving beyond a simple user interface for the original bot into a distinct entity. Upholding the team's commitment to community and transparency, AESIR has promised to open source as many of its repositories as possible without compromising application security.

AESIR goes beyond the original Volatility Module, incorporating features such as Technical Analysis and TradingView support. It allows users to combine these features to devise unique strategies. The platform also encourages a community-driven approach by allowing users to share and copy public strategies from other users. This spirit of mutual learning and shared success remains a key pillar of AESIR.

"We also wanted it to be fast, like really fast." The Aesir team continued. "That's why AESIR is the only platform on the market to operate on 10 second tickers. And our execution speed is around 1 second, leaving pretty much all other algorized platforms our there in the dust."

Two years on from its inception on a Reddit thread, AESIR has launched officially. The AESIR team extends its gratitude for your interest and wishes everyone a prosperous day.

The platform looks great, and you clearly see the amount of effort and time that was put into it. Congratulation to AESIR for bringing this into the market. It will definitely prove a useful tool for many traders and cryptocurrency enthusiasts.
