

IP2Location IO Zapier app is now available!

Free geolocation API to power your business processes via Zapier!

Bayan Lepas, Penang May 19, 2023 ([Issuewire.com](https://www.issuewire.com)) - Great news, IP2Location fans!! We are proud to announce the availability of our new IP2Location IO Zapier app. You can be one of the first ones to try out this new Zapier app.

This new [IP2Location IO Zapier app](#) works with our latest geolocation API at ip2location.io.

Zapier is a great way to automate data sharing between apps. For example, without any coding, we can pass data from Google Sheets to IP2Location.io and vice-versa. There are hundreds of apps that can be integrated with the IP2Location IO Zapier app, thereby enriching reports or analyses with useful data such as country, region, city, latitude and longitude.

The [free API plan](#) at ip2location.io even comes with autonomous system number (ASN) and autonomous system (AS) data. That makes it a great way to manage and troubleshoot network issues for network administrators. We've had many people requesting the addition of ASN and AS data into our geolocation API previously. The API at ip2location.io has now fulfilled that request with the integration of ASN and AS data within the geolocation result.

Did we mention that you can use the free API plan with this Zapier app? Yes, you can. This is a small gesture of appreciation for the support and love by our customers over the years. With 30k of free geolocation queries every month, small and medium enterprises can now benefit from our data expertise at no cost.

Geolocation should not be a privilege of big corporations. Everyone can utilize geolocation data to better allocate resources for marketing, security and much more.

More advanced users can upgrade their free plan to the Starter plan to enjoy more data such as ISP, IDD code, area code, weather station, net speed, elevation and usage type. In addition, they will have access to 150k queries per month vs. the 30k from the free plan.

By upgrading to the next higher plan which is the Plus plan, more data is available. Plus plan users can query IP addresses for their proxy information, mobile network, continent and so forth. The Plus plan comes with 300k queries per month, making it more than sufficient for most users.

Last but not least, the highest Security plan comes with the addition of the IAB category and district data. This plan allows 600k geolocation queries per month.

The flexibility of choosing the right API plan for your business needs makes the new IP2Location IO Zapier app the suitable choice for all of your requirements.

Get started with the [IP2Location IO Zapier app](#) today by signing up for a free API key at the link below:
