

Malta Venus Mulling Record Volumes in Biorepeel Peeling; to Expand Facilities

South Eastern, Malta Jun 11, 2023 ([Issuewire.com](https://www.issuewire.com)) - **Malta:** In response to the big growth in Biorepeel treatment for skin, Venus Malta is planning more treatment outlets as part of the brand drive.

The [BioRePeel peeling](#) method is an excellent anti-aging treatment with all amino acids and vitamins packed intact. It decreases damage from UV light, pigmentation, or acne with the core of the treatment being mild exfoliation.

The Biorepeel treatment dissolves bonds between cells thereby knocking off the top layer of skin for showing off the glowing smooth layer underneath. The exfoliating of the skin surface helps in stimulating the production of collagen and elastin.

Using self-neutralizing trichloroacetic acid (TCA) 35 percent peel penetrates the skin to curate skin aging, dyschromia and pigmented lesions, and acne scars on the skin. The chemical peel provides three effects bio-stimulation; revitalization and peeling.

Biostimulation amplifies fibroblasts and skin texture revitalization helps skin formation and peeling activates skin renewal. The treatment offers an anti-aging remedy and is very refreshing in terms of its effects as the formula removes blocked pores and deep blackheads that were out of reach for regular facial treatments; the antibacterial effect of BioRePeel also helps in curing acne-related complications.

According to Venus CEO, there is zero downtime with purification and oxygenation of the skin encouraged. The CEO also updates that its flagship [Grande Lash Mascara](#) facilities will also be enlarged. The process aims to get a faux lash look natural lashes. This rich-black mascara provides extreme lash length and volume blending peptides, panthenols, and natural waxes to condition lashes to promote longer lashes.

The water-based mascara is easy to remove preventing any lash breakage. It resists lumps and clumps and makes lashes flexible. The applicator brush has long and short fibers reaching every lash giving maximum volume without sacrificing length. The results include a surge in lash length, lash volume, and healthier lashes.

BioRePeel is an innovative treatment with patented technology. It provides bio-stimulation, revitalization, and peeling effects. The stimulation of biosynthetic processes restores the skin structure and is highly recommended for young skin facing disorders like acne, black heads, scarring, as well as fine wrinkles. There may be a tingling sensation during the treatment. And the peel gets a closure with normal water and mineral-based SPF cream.

The treatment is fine for the face, neck, body, hands, elbows, glutes, knees, and feet. It requires no injections or anesthesia. Instant results and treatments done in a span of one or two weeks are the main highlights.
