

Infiwave and Katalon Join Forces to Drive Next-Level Software Testing and Automation

San Francisco, California Jul 3, 2023 ([Issuewire.com](https://www.issuewire.com)) - Infiwave and Katalon have joined forces to provide a comprehensive solution for Quality Assurance and Testing addressing the automation, API, mobile, and web-based testing aspects.

Recognizing this, **Dharinder Vashishta, CEO of Infiwave Solutions**, emphasized the significance of their partnership with Katalon in ensuring a flawless software experience. Through this collaboration, QA experts will be empowered to conduct web, mobile, desktop apps, and API tests across various verticals, striving to deliver an exceptional experience for users. QA testing has now become an integral part of organizations' development and strategies worldwide.

In the competitive enterprise landscape, it is crucial for organizations to remain ahead and excel. To achieve this, quality software and app testing are essential to ensure reliability, security, and user-friendliness.

About Infiwave Solutions

*Infiwave has recently launched **TestFirst QA** to provide pure-play quality assurance and software testing services.* The company has a highly qualified team of mobile and application testing engineers to improve performance, automation, and security bottlenecks. In the market where the competition is fierce with the rapid launch of AI-powered gaming apps to software and mobile app developments, it becomes crucial to have the next-gen QA services performed to run the application smoothly with high

performance. The company is well equipped to perform the activities with precision, significant productivity, and reduced costs to help clients experience the best business expansion.

About Katalon

Katalon is an AI-augmented test automation platform that helps teams of any size deliver better software faster, easier, and more efficiently. The platform accelerates end-to-end software development by powering the authoring, execution, and insights of test automation across any app or environment, and flexibly integrates across a team's architecture and processes.
